

Bonus Session 1: Windsurf + Devin

13:22 - 13:29

Kartik_Outskill: Hello, hello, hello, hello, hello everybody, good evening, good morning, good afternoon from wherever you are joining in from.

13:29 - 13:32

Kartik_Outskill: How are you all today? How are you all doing?

13:38 - 13:42

Kartik_Outskill: Amazing, amazing, amazing, amazing, amazing. Feeling smarter, great!

13:43 - 13:57

Kartik_Outskill: This is so good to see, this is so good to see, great, fantastic, amazing, amazing, amazing, amazing. Great! Cool, folks! This is so good to see, so good to see the chat, how it is flowing.

13:58 - 14:09

Kartik_Outskill: very, very warm welcome to all of you to AI Sprints and Masterclasses. As we said, this is our, effort to create,

14:09 - 14:17

Kartik_Outskill: a learning environment, even, after your cohorts are over. This is our, small,

14:18 - 14:26

Kartik_Outskill: attempt to provide value, to keep providing value to you, and this is where we bring in AI sprints and master classes, and

14:26 - 14:27

Kartik_Outskill: To date.

14:29 - 14:43

Kartik_Outskill: No, somebody was saying I'm muted, I'm sorry, I am... I have been speaking, and I don't think there was an issue. Folks, can somebody confirm if, I am clearly visible and audible to all of you?

14:44 - 14:47

Kartik_Outskill: Amazing, amazing, amazing! Great!

14:47 - 15:01

Kartik_Outskill: Great to see that, great to see that coming in. Okay, so, folks, as I was saying, we have been bringing in these AI sprints, and today and tomorrow, we have got you something

15:01 - 15:03

Kartik_Outskill: Extremely amazing.

15:04 - 15:13

Kartik_Outskill: We have got you what we have never covered at all in any cohort, but we thought we want to deliver this. We want to,

15:13 - 15:29

Kartik_Outskill: teach you all this one thing, and we are bringing you Winsurf and Devon AI Sprint. Our today's session, that is our day one, is to getting started with the agent building on Winsurf and Devon, and

15:29 - 15:32

Kartik_Outskill: Just wanted to understand, just want to know.

15:32 - 15:40

Kartik_Outskill: Are you all excited for this? Can I have excited in the chat if you all are excited for this?

15:45 - 15:56

Kartik_Outskill: Amazing! Amazing, amazing, amazing. So, so good to see you, so good to see that, so good to see that. Okay, few things before we get started, and before we,

15:56 - 16:12

Kartik_Outskill: directly dive into the session, please make sure to keep the, keep your questions written down. Please try, to do that. Try not to apply things right when we are tri- when we are teaching. Pay full attention.

16:12 - 16:19

Kartik_Outskill: Few simple things. Be mindful of what you are typing in the chat. Don't spam anything. Be respectful.

16:19 - 16:24

Kartik_Outskill: And on this note, Are you all excited to meet your mentor?

16:25 - 16:40

Kartik_Outskill: Give me... drop boom in the chat, so that I can call in the mentor for the... for today. Drop Boom in the chat, so that I can call in our mentor for today. Yeah, somebody have guessed it also. Amazing, amazing, amazing.

16:41 - 16:44

Kartik_Outskill: Great! So...

16:44 - 16:56

Kartik_Outskill: We are bringing in one of your favorite mentors, or I should say your favorite mentor, who you all have been learning for quite some time.

16:56 - 17:16

Kartik_Outskill: He's none other than KVS Dilip. You all know him, he is the head of Gen AI Education at Outskill. He's been the AI educator. He's helping out a lot of people building AI solution, and I bring to you Dilip today for this amazing, amazing session. Hello, Dilip, are you there? Good evening.

17:18 - 17:19

Dileep Karri: Hello, hello, everyone.

17:21 - 17:30

Kartik_Outskill: Hello! Cool! Folks, so we have Dilip with us, and we will be diving into that. Dilip, I will not take any more time. Over to you.

17:31 - 17:36

Dileep Karri: Thank you, thank you, Karthik, and hello, everyone. Glad to see all of you.

17:46 - 17:54

Dileep Karri: Awesome, awesome. Please don't mind my rugged look. I think it's end of the day. It has been a little tiring weekend overall.

17:54 - 18:01

Dileep Karri: Right, so, that's a story for another time, but yeah, you know.

18:01 - 18:20

Dileep Karri: almost went to a police station, yeah, almost went to a police station. So that's been the thing. Luckily, it all sorted out, right? But, yeah, you know, it's all good, but just a little bit tired. So today, I'll take session, for,

18:21 - 18:36

Dileep Karri: like, you know, 2 hours, I'll do more fundamentals. Tomorrow, we will go, you know, a little bit better. And I also realized that I have to take a new photograph. The old photograph, I'm looking very bloated, kind of, right?

18:36 - 18:41

Dileep Karri: So, you know, I just want to... I think I need to get a new photograph.

18:41 - 18:46

Dileep Karri: Got it. So let me set the context of what I'm going to, you know, kind of cover today.

18:47 - 18:52

Dileep Karri: So, see, these sessions, right, there are no holds barred in the way.

18:53 - 19:09

Dileep Karri: Okay? So that means I don't have to think at the back of my mind, okay, should I cover this, or should I not cover this? Will people understand? Will people not understand? I don't have all those limits over in these sessions, especially the springs and master classes.

19:09 - 19:15

Dileep Karri: I will tell you in advance, exactly, like, you know, what

19:15 - 19:28

Dileep Karri: level this is going to be. So today will be, like, a beginner to intermediate level. It is not going to be advanced. Today, I'm going to keep it very intermediate, but I'm going to try to teach you some advanced concepts.

19:28 - 19:42

Dileep Karri: Especially in terms of coding. So, what I want to do is, think of the session, see, if you Google windsurf, and if you Google Devon, you will understand what these can do any place, anywhere, etc.

19:42 - 19:52

Dileep Karri: But what I want to do instead is, I want to teach you some concepts, and teach you a very different framework on how should you work with coding agents in the right manner.

19:52 - 20:11

Dileep Karri: Okay? So that is exactly how we are going to do this. So let me remove some objections. Some people still have confusion as to where these recordings are, where they are available, etc, and all that. So, all of that, Karthik will talk to you again towards the end, plus some

20:11 - 20:25

Dileep Karri: new initiatives that we have planned, so that is coming your way. So, we want to really double down on the community so new initiatives are coming. So, I will use Windsorf and Devin, of course, but today I will just show you WildServe

20:25 - 20:43

Dileep Karri: what it is. I will talk to you about a few concepts. I will revise GitHub. I will talk to you about how, you know, kind of, you can work with anything. And this framework can work in any IDE as such, but there are some builds of specific things.

20:43 - 21:02

Dileep Karri: That is what we are going to cover. Okay, so today's session is meant for non-coders to get a little more understanding of tech. So I will cover tech concepts, but in a non-technical flavor, so that you are very clear in terms of, okay, these are the things that could come.

21:02 - 21:05

Dileep Karri: So basically, till now.

21:06 - 21:16

Dileep Karri: Let me ask you this question. How many of you have shared your VIP-coded applications with anybody? Anybody who has shared the VIP-coded applications?

21:16 - 21:19

Dileep Karri: Can I have me in the chat who has shared the white-coded applications?

21:20 - 21:24

Dileep Karri: Okay? This is for the... for the people who have shared.

21:25 - 21:28

Dileep Karri: Have you seen, or have you kind of,

21:29 - 21:32

Dileep Karri: You know, had your friend, to whom you shared.

21:33 - 21:41

Dileep Karri: Coming back saying, this is not working, that is not working, you know, this has gone wrong, that has gone wrong, etc.

21:43 - 21:54

Dileep Karri: Right? Some of you have even published on App Store, wonderful. I'll talk about that also. But, you know, for some multiple bugs that are coming in.

21:55 - 21:59

Dileep Karri: Okay? So I will try to talk about, you know, how...

21:59 - 22:04

Dileep Karri: You can anticipate a little bit of bugs, and how can you clear that out?

22:04 - 22:20

Dileep Karri: Okay, so, I would, you know, try to talk about that in detail today. So today's session will be foundations, and, see, don't expect me to show you tool, like, open the tool and say, hey, this is here.

22:20 - 22:36

Dileep Karri: This is here, this is here, this is here, that is the point. That is not the point of this, because that is something you can find out anywhere. My thing is to show you the nuances of how you can work with agents, or how you can get your agents to code, and what are the things that you need to be worried about when building with stuff.

22:36 - 22:49

Dileep Karri: So, for some of you, this session might feel a little slower than usual, okay? So, but still stick around, maybe keep it like a white noise and keep tuning into some words.

22:49 - 23:07

Dileep Karri: That you kind of are latching onto. There'll be some new things I'm going to teach about, okay? And then we will do this, okay? Now, I have kept this chat to hosts and panelists, that is by purpose, because you... I have to be the person who is seeing your chat, you don't have to see other people's chats.

23:08 - 23:16

Dileep Karri: Okay? I will try to go slow, but not the slowest, because there is something I want to cover, so I will stick to that.

23:16 - 23:27

Dileep Karri: Anybody is facing any difficulty, you are feeling too anxious, thinking, okay, oh my god, this is going above my head, okay? Please note that these are optional sessions.

23:27 - 23:40

Dileep Karri: That means anytime you feel some kind of anxiety, feeling that this topic is not for me, maybe this is exactly not what I was looking for, right? You can easily top off.

23:41 - 23:53

Dileep Karri: Okay? For others, stay with the ride, understand what is happening, and we will take it forward. Alright? So, without any further ado, let's get to it, and we will get started.

24:11 - 24:13

Dileep Karri: Alright, so what I'm going to do...

24:13 - 24:31

Dileep Karri: is... let me just arrange the chat so that I can keep a look on it. By the way, I'm not going to take up too many questions. I will have an eye on the question, but I will not be able to take up all of the questions. I will take a sample, which I feel are relevant.

24:31 - 24:49

Dileep Karri: Now, for those of you who are asking, questions like, you know, if, will you tell me the difference between this and that, etc, I might touch upon it. The intention is to show you a different type of agents, okay? And I'll tell you why, also, we are doing this overall.

24:50 - 25:12

Dileep Karri: So, today's sessions will be foundations, which is good, and, you know, today's session will be based on this. I might not be going to go into too much detail, saying, you know, this is why it is different from cloud or anything, because at the end, everything looks similar. What I'm going to do instead is I'm going to give you a framework of how to work with this agentic

25:12 - 25:15

Dileep Karri: Code, and how do you take it forward?

25:15 - 25:25

Dileep Karri: Okay? So, first thing, okay? What I want all of you to understand is, towards the course of these two days, I am going to take you

25:28 - 25:35

Dileep Karri: I'm going to take you from vibe coding Two words, agent decoding.

25:39 - 26:02

Dileep Karri: I'm going to go from... take you all from VIP coding to agentic coding. That is the purpose of the session, today and tomorrow. In the previous session, which I had done on cloud code, also we were, in, doing similar, but this time I'll try to teach you a different framework after going... taking you from wipe coding towards agentic coding.

26:02 - 26:08

Dileep Karri: Okay? So... When we go talk about white coding.

26:08 - 26:16

Dileep Karri: What do you mean by white code, okay? In white coding, typically, right, you explain.

26:18 - 26:20

Dileep Karri: your requirement?

26:24 - 26:27

Dileep Karri: Then, an AI builds...

26:30 - 26:32

Dileep Karri: the requirement.

26:34 - 26:41

Dileep Karri: Okay? And... Anytime you are adding a new feature, it is a conversation.

26:44 - 26:46

Dileep Karri: Okay? That is vibe coding.

26:47 - 27:01

Dileep Karri: Now... When it comes to agentic coding, Right? You... specify your requirement.

27:03 - 27:08

Dileep Karri: That means some kind of tech jargon comes into play.

27:09 - 27:16

Dileep Karri: Okay? Then, it is not just a single AI agent's... Build.

27:17 - 27:23

Dileep Karri: And what you're having is not a conversation, it is a specification.

27:25 - 27:27

Dileep Karri: Or a direction.

27:29 - 27:35

Dileep Karri: Now, I will go even a level lower. What is the difference between a conversation and a specification?

27:35 - 27:49

Dileep Karri: Okay? A conversation is an informal chat between you and the AI, where you are trying to figure out what is it that you want to build. You don't have a clarity, you are trying to get there. That is a conversation.

27:49 - 28:05

Dileep Karri: Specification is, in your head, it is absolutely clear what you want to build, you know what the agent has to do, you give the specification, agent takes the specification, and sometimes even a swarm of agents will come and try to build out your app.

28:06 - 28:15

Dileep Karri: Okay? Vibe coding is a conversation, agentic coding is a specification. That is how you should think about. And therefore, vibe coding

28:15 - 28:23

Dileep Karri: In a way, you can do it on platforms like Bold, Lovable, Emergent.

28:26 - 28:31

Dileep Karri: Okay, these are the platforms which are... you do wipe coding. Here, you are...

28:33 - 28:49

Dileep Karri: you know, trying to be not so technical, and you're trying to get the job done. So, that's what is happening. You are doing a conversation and getting a job done. Now, sometimes, underneath, there could be a lot of agents doing the work, but it's a conversation. You say, I want to do this, I want to do this, I want to do this.

28:49 - 29:01

Dileep Karri: Agent decoding, you provide a specification, saying that this is exactly what I want to build, these are the features I want to build, so you try to go with a spec or specification.

29:02 - 29:08

Dileep Karri: When you're doing agent decoding, and there is a proper agent that is working underneath.

29:10 - 29:16

Dileep Karri: Nowadays, especially in this year, the gap between agentic and wipe coding has reduced, but

29:17 - 29:26

Dileep Karri: If you have been working on cursor, Wind surf... plot, code, Codex?

29:28 - 29:40

Dileep Karri: etc. You have been doing some level of agent decoding. Again, the lines could be blurred a little bit. Like, sometimes you could be even white coding on cursor, but you could also be trying to do

29:41 - 29:48

Dileep Karri: agentic coding on lovable. Lines can be blurred, but basically, agent tick means it's a higher level of coding.

29:49 - 30:08

Dileep Karri: All right? Is this point clear, everyone? What is the subtle difference between vibe coding and agentic coding overall? It's a very subtle difference, but the idea here is that we should... if you're trying to become an AI generalist, we should start making the transition from VIP coding towards agentic coding.

30:08 - 30:15

Dileep Karri: Okay? So, what do we need to do to become in agent decoding? What is the steps?

30:17 - 30:23

Dileep Karri: Okay, there are 3 steps, and we will go through those 3 steps by understanding what it is that we are doing.

30:24 - 30:28

Dileep Karri: So, step number one that we are trying to do in here

30:29 - 30:34

Dileep Karri: is we need to understand and be comfortable with this platform called GitHub.

30:35 - 30:45

Dileep Karri: Okay? This platform called GitHub is something you need to be comfortable with, and you need to be aware of what GitHub is.

30:45 - 30:54

Dileep Karri: Right? I will recap GitHub for, like, 15-20 minutes, so that people who forgot about it, it'll be like a brush of memory.

30:55 - 31:03

Dileep Karri: Then... Second thing is, you need to be clear that you need to give specification

31:03 - 31:12

Dileep Karri: And you need to specify what you want to build, so specification becomes important. How do you write good specs?

31:16 - 31:25

Dileep Karri: That is what we are going to understand. And third, of course, is agentic building and orchestration, for which we will use wind surf and Devin.

31:32 - 31:43

Dileep Karri: Okay? In today's session, I will focus mainly on the plan part of it. Like, I will be focusing, deeply on the planning part of it.

31:44 - 31:58

Dileep Karri: On how can we plan, what are the things we need to understand, and we'll go deep into some concepts that everybody needs to understand with respect to the agentic coding frameworks that we are going to look at.

31:58 - 31:59

Dileep Karri: So...

32:06 - 32:22

Dileep Karri: today's output, the planning that we are going to do, right? I am going to... I'm challenging myself, in a way, and I'm going to build, over the course of the two days, I will build something called superplexity.

32:25 - 32:30

Dileep Karri: Okay? That means I want to elevate and give an advanced version of perplexity.

32:31 - 32:33

Dileep Karri: So I'm just calling it super complexity.

32:35 - 32:48

Dileep Karri: Right? So, I will try to build SuperPlexity, an advanced version of Perplexity, with agentic coding, and we will try to see where we'll go. I might not be able to build it completely.

32:48 - 32:53

Dileep Karri: But I will be able to get to a good shape, is what I am feeling.

32:53 - 33:17

Dileep Karri: And I'm also going to show you one part which we typically don't show, that is, an existing application. How do you work with agentic coding and work with that? Because from scratch, when you're trying to build an application, everything looks hunky-dory, but when you're taking an existing code and trying to add features and you're trying to pick it up, that is where things break, so we will talk even about that.

33:18 - 33:25

Dileep Karri: Alright? So... First things, right? We will talk about GitHub.

33:29 - 33:32

Dileep Karri: Okay? How many of you know GitHub?

33:32 - 33:34

Dileep Karri: Properly use it day to day.

33:35 - 33:38

Dileep Karri: If you use it, say yes. If you are not using it, they say no.

33:46 - 33:51

Dileep Karri: Yeah, I just opened a chat. If you're using it saying yes, or using it, say no.

33:51 - 33:56

Dileep Karri: Got it. I think I see, like, a good,

33:56 - 34:11

Dileep Karri: 60-40% of people who have used it and not used it. So, people who have used it take it like a revision of GitHub concepts, but of course, I'll make it very interesting for you to understand, and maybe some advanced concepts that I will, tell you.

34:11 - 34:21

Dileep Karri: Okay? And for this, I am going to take an example of my favorite food.

34:22 - 34:36

Dileep Karri: Okay? I'm going to take an example of a favorite food. I'll keep the chat open to hosts and panelists. Please don't spam. You can, you know, I'll keep it open. I'll just keep an eye on the messages. Okay? So...

34:37 - 34:46

Dileep Karri: Let's... Try to go with the food, and let us assume that it is a restaurant, and

34:50 - 34:58

Dileep Karri: And I think it is the restaurant of the questions. Folks, if you spam, I'm going to stop it again, okay?

34:59 - 35:01

Dileep Karri: So please don't spam.

35:04 - 35:07

Dileep Karri: So, we're going to look at the restaurant.

35:08 - 35:12

Dileep Karri: And the restaurant would be something on...

35:18 - 35:22

Dileep Karri: I think I'll go with Pisa. Universal example, easy to do.

35:22 - 35:29

Dileep Karri: I'll go with pizza, okay? Sushi, I don't know, okay? I don't know sushi, so I'll go with pizza, which is something that I know.

35:31 - 35:35

Dileep Karri: So now that we're going with pizza, let us assume that there is a chef.

35:37 - 35:43

Dileep Karri: Okay? And for the chef, what we are going to do is, the chef has a recipe book.

35:48 - 35:49

Dileep Karri: of the...

35:52 - 36:01

Dileep Karri: two to three best pizzas. So, this is a very limited restaurant, so to say, and they have a recipe book of the two to three best pizzas.

36:01 - 36:05

Dileep Karri: the sides... etc.

36:05 - 36:09

Dileep Karri: Okay, the best pizzas, the sides, etc. There is a recipe book.

36:09 - 36:12

Dileep Karri: Okay? And now, in the recipe book.

36:12 - 36:18

Dileep Karri: The chef has a team of... Say, sous chefs?

36:26 - 36:27

Dileep Karri: etc.

36:28 - 36:36

Dileep Karri: Now, the chef told the sous chef, look, our restaurant has been stale for long.

36:36 - 36:42

Dileep Karri: Okay? We have been giving the same recipe over and over and over again.

36:43 - 36:46

Dileep Karri: Now, I won't use the sous chefs

36:46 - 36:49

Dileep Karri: To actually come up with a new recipe.

36:51 - 37:01

Dileep Karri: Alright, so now they want to come up with a new recipe. Then the shoe chefs proposed, why to come up with a new recipe? Let us work on the existing recipe itself.

37:03 - 37:07

Dileep Karri: Okay? That is coming to the existing recipe.

37:08 - 37:14

Dileep Karri: Right? So now, when coming with, existing recipe, What happens is.

37:15 - 37:21

Dileep Karri: This sauce chef wants to change one of the recipes.

37:27 - 37:33

Dileep Karri: Chef, give me the book, I will tear the old recipe and attach the new recipe.

37:33 - 37:38

Dileep Karri: Is it a good thing to do? Tearing the old recipe, attaching the new recipe?

37:40 - 37:41

Dileep Karri: Okay?

37:42 - 37:43

Dileep Karri: Why is it not good?

37:47 - 37:51

Dileep Karri: Tearing the new recipe and attaching... tearing the old and attaching the new recipe.

37:53 - 38:02

Dileep Karri: Okay? What happens is, there is something which is working very well. You are trying to throw it out of the window and try to do something else.

38:05 - 38:10

Dileep Karri: Okay? You're trying to do something else because you're going to throw out the recipe.

38:11 - 38:17

Dileep Karri: Okay? Now, I want to change... there are 7 steps in my recipe.

38:21 - 38:35

Dileep Karri: There are 7 steps in my recipe, and suppose Sous Chef 1 wants to change Step 3, Sous Chef 2 wants to change chef 5, Sous Chef7 wants to change Step 7.

38:35 - 38:38

Dileep Karri: And they make the changes without informing the chef.

38:39 - 38:46

Dileep Karri: Now, what happens when the chef uses the new 7 Steps and makes the pizza? What do you think will happen?

38:47 - 38:49

Dileep Karri: Can you put one word of what do you think will happen?

38:52 - 38:55

Dileep Karri: Chaos, disaster, mess.

38:55 - 38:56

Dileep Karri: Catastrophe.

38:57 - 39:05

Dileep Karri: Right? So, if I have to work on an existing recipe, I have to be careful.

39:06 - 39:13

Dileep Karri: Now, can you tell me a system so that the three shoe chefs can work on the recipe easily?

39:15 - 39:17

Dileep Karri: Give me a common sense system.

39:23 - 39:32

Dileep Karri: Don't give me technical answers, give me a normal answer. I know people who know GitHub are, oh, yes, yes, Dilip is telling this topic and giving me the answers. I want you to

39:33 - 39:36

Dileep Karri: Ask, tell me what is the thing you will do?

39:37 - 39:52

Dileep Karri: Okay? Somebody stole it, right? Make a copy of the recipe, okay? So what the chef will do, my dear sous chefs, I know you're super enthusiastic, but don't kill my restaurant. I will give you a copy of this recipe.

39:52 - 39:58

Dileep Karri: I will give you copy 1, I will give you copy 2, I will give you copy 3 of the same recipe.

39:58 - 40:03

Dileep Karri: Now, this copy, you make the changes as you want.

40:05 - 40:07

Dileep Karri: Okay? So, everybody with me so far?

40:08 - 40:10

Dileep Karri: Are you guys with me?

40:12 - 40:16

Dileep Karri: Yes? People who know GitHub, are you able to relate it better now?

40:19 - 40:23

Dileep Karri: Great. So, I am giving these 7 steps.

40:24 - 40:32

Dileep Karri: So now... what I'll do is, I have, say, the main recipe, I'll call it,

40:32 - 40:36

Dileep Karri: Which has the original 7 steps of this recipe.

40:37 - 40:41

Dileep Karri: So now, this A, I will give A1 to Sue Chef.

40:42 - 40:43

Dileep Karri: 1?

40:43 - 40:45

Dileep Karri: I will give A2.

40:46 - 40:50

Dileep Karri: sous chef, 2, I will give A3.

40:52 - 40:54

Dileep Karri: To... sous chef.

40:54 - 41:09

Dileep Karri: 3. It is the same PISA, it is just copies. A1 has one copy, A2 has, it's another copy to SUSHF2, A3, another copy to SUSHF3. So, I have those copies given.

41:10 - 41:13

Dileep Karri: Okay? So, I have copied this to Shoe Chef.

41:13 - 41:19

Dileep Karri: Now... Souschef made a change in step 3.

41:20 - 41:27

Dileep Karri: And he found that the pizza was superb. It felt changing the Step 3 elevated the pizza.

41:28 - 41:35

Dileep Karri: So now, can Sous Chef1 directly replace the Step 3 on A?

41:36 - 41:41

Dileep Karri: First of all, does this step need it to be added to the main recipe, yes or no?

41:42 - 41:46

Dileep Karri: Do I need to add the step to the main recipe, yes or no?

41:46 - 42:02

Dileep Karri: Yes, you need to add it, but you should not add it directly. Why do you need to add this step to the recipe? Because later, you will have other chefs also who are going to use this recipe, so the recipe needs to be updated.

42:05 - 42:20

Dileep Karri: Okay? The recipe needs to be updated. So, step 3, I go back, and I will add it over on this thing. So, but, can I... can the sous chef one tell, oh, I'm a genius, let me add it directly?

42:20 - 42:22

Dileep Karri: What should this sous chef actually do?

42:24 - 42:27

Dileep Karri: Can you guys tell me? What should the sous chef actually do?

42:32 - 42:35

Dileep Karri: He will ask permission from the chef.

42:36 - 42:37

Dileep Karri: Ask.

42:38 - 42:39

Dileep Karri: Okay.

42:39 - 42:43

Dileep Karri: Dear chef, I made this change of step 3.

42:44 - 42:45

Dileep Karri: Test it yourself.

42:46 - 42:49

Dileep Karri: The chef will take... follow the steps.

42:49 - 42:57

Dileep Karri: Tastes the pizza and understands, okay, is my pizza tasting better, or is my pizza tasting worse?

42:58 - 43:03

Dileep Karri: Okay? Then the chef will say, okay, let us merge the recipes.

43:04 - 43:16

Dileep Karri: Let us now merge the recipes, wherein I will add this step of this into step 3, so now my, recipe is up to date.

43:18 - 43:21

Dileep Karri: Now, A2 made a stiff, you know.

43:22 - 43:26

Dileep Karri: Something on A2 made something on step 5.

43:27 - 43:30

Dileep Karri: The... he asked the chef the permission.

43:30 - 43:33

Dileep Karri: Then what happened? The pizza became soggy.

43:34 - 43:36

Dileep Karri: The pizza became soggy.

43:36 - 43:39

Dileep Karri: So, will the chef accept or reject?

43:44 - 43:52

Dileep Karri: The chef will reject, but... Our chef is a very good chef. He's not a, you know, bad chef.

43:52 - 43:54

Dileep Karri: He will reject with feedback.

43:56 - 44:03

Dileep Karri: Saying, I like your thought process, but the pizza is getting too soggy.

44:04 - 44:18

Dileep Karri: Okay? So, I will give some understanding that the pizza is getting too soggy, and reject its feedback. So, A1's recipe is done, A3 recipe is fine, then A2 will continue working on the

44:18 - 44:19

Dileep Karri: This...

44:21 - 44:35

Dileep Karri: Right? But then he decides, you know what, A1 has done some work on step 3, I have an idea, let me work on step 3 again. So A2 elevates step 3 further.

44:35 - 44:44

Dileep Karri: And then the taste improves, the chef accepts it. So, everybody works on copy of the recipe.

44:44 - 44:49

Dileep Karri: Working on the copy doesn't affect the main recipe.

44:49 - 44:57

Dileep Karri: Okay? As this experimentation goes on, okay? This experimentation is going on for 30 days, 45 days, etc.

44:58 - 45:06

Dileep Karri: When the experimentation is going on, only when people are convinced that the taste has elevated.

45:06 - 45:14

Dileep Karri: Will the step be incorporated into the main recipe? Otherwise, the main recipe pizza keeps getting made for the customers?

45:15 - 45:21

Dileep Karri: While the sous chefs keep experimenting on the different steps and trying to elevate the... this thing.

45:23 - 45:27

Dileep Karri: Okay? Now, let me ask the engineers.

45:27 - 45:40

Dileep Karri: Do you have a better way to explain GitHub to your friends, your non-technical friends? If somebody asks, can you explain me GitHub, do you have a better way to explain GitHub to your friends?

45:44 - 45:53

Dileep Karri: Okay? So what I meant is, you can use this pizza explanation to your non-technical friends and explain what GitHub actually does.

45:53 - 46:01

Dileep Karri: Okay? Now that we have understood this process, now let us understand GitHub and come back to this.

46:01 - 46:05

Dileep Karri: Now, in GitHub also, same thing happens.

46:05 - 46:11

Dileep Karri: Okay? In GitHub, Is equivalent to the restaurant.

46:15 - 46:20

Dileep Karri: Okay? GitHub is equivalent to the restaurant.

46:21 - 46:38

Dileep Karri: Alright, and then there's a chef. In this case, you can say, if you are a team of 3 people building your code, let one of you be the chef. Who knows, maybe slightly better, can, you know, kind of check the app well, so that person is the chef.

46:39 - 46:40

Dileep Karri: I ain'.

46:40 - 46:57

Dileep Karri: This... in this, the way you work is, you say, you work on the dough, you work on the toppings, you work on the sauce, etc. You work on different features of the pizza, and then when you say, okay, I want to merge it to the original

46:57 - 47:04

Dileep Karri: pizza recipe. This person verifies if the work is good, nothing is breaking, and then you merge it.

47:04 - 47:08

Dileep Karri: So, here it goes, explaining GitHub 101.

47:09 - 47:13

Dileep Karri: When you have the original software.

47:15 - 47:30

Dileep Karri: when you have the original software, and you want others to work on different portions of the original software. When you work on different portions of the original software, you create what is called branch.

47:33 - 47:37

Dileep Karri: Okay? You create what is called branch.

47:37 - 47:49

Dileep Karri: Okay, there is another concept called work tree. I will explain that tomorrow. There is a subtle difference, I don't want to confuse you people. For now, let us assume that we are creating branch.

47:49 - 47:52

Dileep Karri: Okay, we are creating the branches.

47:53 - 47:58

Dileep Karri: Then, each person works on the branch independently.

47:59 - 48:02

Dileep Karri: Everybody, independently.

48:03 - 48:07

Dileep Karri: works on the branch. For example.

48:07 - 48:10

Dileep Karri: Here, I might be working on authentication.

48:10 - 48:14

Dileep Karri: Here, I might be working on front-end.

48:14 - 48:17

Dileep Karri: Here, I might be working on backend.

48:24 - 48:30

Dileep Karri: Okay? I am working on auth, I am working on front-end, I am working on back-end.

48:30 - 48:44

Dileep Karri: Okay? So now that I understand front-end, back-end, everything, etc, right? That's exactly how you, once you are done, you check if you can merge

48:44 - 48:55

Dileep Karri: Into the main thing, and this request asking that, you know, we made some changes, we want to merge to the original code, that is called a PR, or a pull request.

48:58 - 49:03

Dileep Karri: Okay, pull request means that you are merging to the main branch.

49:05 - 49:13

Dileep Karri: Alright? For those of you who are feeling it was a reputation, repetition, you will have to be patient.

49:13 - 49:17

Dileep Karri: How many of you feel this is repetition and you don't want to listen to this?

49:22 - 49:23

Dileep Karri: Okay?

49:24 - 49:34

Dileep Karri: Majority of you are saying yes, so I'll keep going. For others, any point you don't like this, you're free to drop off, but please be patient for others also.

49:35 - 49:41

Dileep Karri: Okay? So now... This is what is called a pull request.

49:42 - 49:47

Dileep Karri: Okay, where I am taking an independent work, and then I am merging it.

49:49 - 49:56

Dileep Karri: So, in GitHub, there are 3 main operations that you need to worry, you know, think about. One is branch.

49:58 - 50:09

Dileep Karri: Okay? Branch means... and there is one more thing which I'll explain, just a little better. First is branch, where you take a different copy and work on it independently.

50:09 - 50:13

Dileep Karri: That is branch. Second is pull request.

50:13 - 50:28

Dileep Karri: Where you say, I have finished my independent work, I want to put this back into the main application. That is pull request, and then when the pull request is accepted, that is where you said merge.

50:29 - 50:35

Dileep Karri: You call the main one as main, and the other one as Branch.

50:37 - 50:38

Dileep Karri: Okay?

50:38 - 50:40

Dileep Karri: Right. Now, what is fork?

50:41 - 50:46

Dileep Karri: Fork is like... the chef.

50:47 - 50:53

Dileep Karri: As a sous chef, who says, you know what, I am a sous chef.

50:53 - 51:08

Dileep Karri: But I want to start my own restaurant. You know, there is this recipe of pizza which I developed with you. Can I take a copy of this pizza and do my own interpretation of the pizza in my own restaurant?

51:09 - 51:16

Dileep Karri: Now, the chef is a very kind person, he doesn't worry about IT, production, etc. He knows he can innovate the pizza anytime.

51:17 - 51:28

Dileep Karri: So, he says, you can take a copy of this pizza recipe and go for your own restaurant. So the sous chef takes a pizza

51:28 - 51:32

Dileep Karri: Copy of the recipe, own restaurant.

51:34 - 51:40

Dileep Karri: Now, when he makes changes in his own restaurant, will it be passed on to the old restaurant?

51:40 - 51:45

Dileep Karri: Do you think the changes made in the own restaurant are passed down to the old restaurant?

51:45 - 51:48

Dileep Karri: No, this is called fork.

51:51 - 52:02

Dileep Karri: Okay? The previous one is called merge, because I am making the changes as a sous chef in the same restaurant, so that's why branch, pull request, merge.

52:02 - 52:17

Dileep Karri: But then, this is a very kind chef. He says you can make any version that you want, so he clones the pizza recipe, starts the own restaurant, and that is what is called a fork.

52:19 - 52:33

Dileep Karri: Alright? So, fork means you are making your own copy, and then trying to do this. You can, for pizza, you can call it pizza also, nobody bothers, okay? Because it is the other person.

52:35 - 52:39

Dileep Karri: Right? So this is GitHub at a glance.

52:39 - 52:53

Dileep Karri: a quick 15-minute, you know, kind of thing about GitHub through overall, then you should understand that once you fork, you cannot merge it back to the main restaurant. It is its own journey.

52:54 - 52:55

Dileep Karri: going together.

52:56 - 53:00

Dileep Karri: Okay? Sometimes, you know, this chef

53:00 - 53:19

Dileep Karri: will be saying, hey, you know what, this is an advanced concept, by the way. Chef will say, hey, hey, you started a new restaurant, good, you are growing, I made some changes. Would you like to incorporate these changes overall here in my new restaurant? Now, here, the chef will request.

53:19 - 53:38

Dileep Karri: you might accept, you might not accept, but mainly, fork means making my own restaurant out of the recipe. Merge or pull request is within the same restaurant. Branch is within the same restaurant. It's a branch. I will again go back to the main restaurant. I am not going to go off branch will not

53:38 - 53:40

Dileep Karri: Exist on my own.

53:44 - 53:57

Dileep Karri: Okay? So, sometimes the chef is good, he says, these are the new features, use it, make it better, make your things better overall, and you can use that. Then, there are other things, like...

53:59 - 54:02

Dileep Karri: You know, there is one more thing called commit.

54:03 - 54:08

Dileep Karri: How many of you have used this thing or saw this thing called commit?

54:10 - 54:11

Dileep Karri: Okay?

54:12 - 54:15

Dileep Karri: Alright, for people who have not seen Commit.

54:15 - 54:22

Dileep Karri: Okay? Even your vibe coding, have you seen Checkpoint or anything like that when you're doing the VIP coding?

54:23 - 54:25

Dileep Karri: Have you seen the checkpoint?

54:26 - 54:30

Dileep Karri: Anybody who did white coding, you would have seen a checkpoint. Don't tell me you've not seen a checkpoint and did the hackathon.

54:37 - 54:39

Dileep Karri: So, what is commit?

54:39 - 54:42

Dileep Karri: Okay? Let us go back to the main restaurant.

54:43 - 54:57

Dileep Karri: The chef incorporated this third step and said, you know what, my pizza is really good right now, let me make a note. And he says, commit.

54:58 - 55:03

Dileep Karri: So, what he means by commit is, he takes a copy.

55:03 - 55:09

Dileep Karri: of it and hides it, okay? He doesn't show it anywhere. He keeps a copy of it and hides it.

55:09 - 55:18

Dileep Karri: Then, by mistake, the sous chef soggy thing got pushed into this, and the pizza kind of got spoiled.

55:19 - 55:25

Dileep Karri: Okay, disaster. Somebody who was supposed to do it, the chef was in a hurry, he...

55:25 - 55:28

Dileep Karri: Allowed one change, the pizza got soggy.

55:29 - 55:32

Dileep Karri: What should the chef do? Come on, tell me.

55:32 - 55:33

Dileep Karri: What can the chef do?

55:41 - 55:52

Dileep Karri: The hidden copy is there, right? He will tear this off and put back the hidden copy. So he'll undo all the changes and go back to the main recipe, that hidden copy he had kept.

55:53 - 55:57

Dileep Karri: So that hidden copy that he has kept is called commit.

55:58 - 56:04

Dileep Karri: So, anytime disaster happens, I can go back to my previous commit and

56:04 - 56:12

Dileep Karri: restore anytime. So it is like, I am having a secret copy. If something goes wrong, I will say, okay, don't worry.

56:13 - 56:19

Dileep Karri: I know that, you know, you guys are going to make mistakes, so I have been intelligent, I have kept a secret copy.

56:20 - 56:38

Dileep Karri: Okay? Commit is telling that you have... I have made these changes. Now, these are the changes I want to put it like a milestone, a checkpoint, so that if something happens wrong, I will go back to the backup copy and undo all my changes.

56:39 - 56:51

Dileep Karri: Okay? So I create multiple versions of my recipe, and because I created multiple versions, I can go back to any version of the recipe that I want, based on my circumstance.

56:53 - 57:00

Dileep Karri: Okay? Clear everybody commit. Commit is like a restore point. It's a reset point. Anybody paid video games?

57:01 - 57:04

Dileep Karri: Have you... any of you played, played video games?

57:04 - 57:19

Dileep Karri: Okay? In a video game, once you cross a certain level, you die a level later, you didn't come back to the level. Like, suppose you say level 4, okay? You go to level 4, you cross level 4. If you die, you'll come back to level 4, not level 1.

57:20 - 57:33

Dileep Karri: Have you experienced that in games? Where you can come back to level 4, because you have stored the game, saved the game, saved points in your game? This is exactly that, saving your points in the game, and coming back.

57:35 - 57:41

Dileep Karri: Alright? So this is exactly GitHub in a glance. I took, like, 15-20 minutes.

57:41 - 58:02

Dileep Karri: So that I can do this, you know, kind of revision. Because if you want to do spec-driven development, or you want to go into agentic development overall, so if you want to be agentic in nature, you need to be very comfortable inside GitHub.

58:02 - 58:22

Dileep Karri: Okay? So you need to be super comfortable inside GitHub, and as I build the superplexity, I will show it in action, and most of the time right now, the AI will do everything for you, you don't have to worry in doing that. Okay? I'm explaining this concept so that you understand what is happening behind the scenes.

58:22 - 58:29

Dileep Karri: I will not show you the commands and everything. When I build the application overall, I will show you that AI can build it out.

58:30 - 58:32

Dileep Karri: Okay? Clear everybody so far.

58:36 - 58:37

Dileep Karri: Are we good?

58:39 - 58:41

Dileep Karri: So, a quick recap.

58:41 - 58:57

Dileep Karri: in your restaurant, right? If you're making a copy of the recipe and making changes, that is the branch, but if you're making a copy of the recipe and starting a new restaurant, that is a fork.

58:57 - 59:09

Dileep Karri: Okay? Then, in the branch, when I make a change and I feel that this change is complete and I want to add it back to the main code, what will happen is.

59:09 - 59:21

Dileep Karri: I will have to raise a pull request asking if I can merge with the main code. The person will do a review and say, okay, everything is working fine, and then allow it to be merged.

59:21 - 59:27

Dileep Karri: If something is not working fine, if some problem is there, we will reject the request.

59:28 - 59:35

Dileep Karri: Once the request has been, considered and kind of done, it will be merged. That is what merges.

59:35 - 59:56

Dileep Karri: And if you kind of are happy with one version of a recipe, you take a copy of it, take a snapshot of it, you save that point at that particular point. Then, as you keep working on the recipe, you make changes to the recipe, you change the recipe overall, you do those changes, etc, what will happen is those changes that you make.

59:56 - [01:00:09]

Dileep Karri: will... if they are leading to a disaster, you will go back to a previous version. You can go back to any previous stored version overall, so that you can do this.

[01:00:09] - [01:00:20]

Dileep Karri: Okay? I can merge many times, but I can commit only when I am sure that I have reached a milestone. Okay? So that is how I can do this.

[01:00:22] - [01:00:26]

Dileep Karri: Alright, so this is GitHub, so that you can understand all of this.

[01:00:26] - [01:00:43]

Dileep Karri: Now, now that we have understood GitHub, the fundamentals, I will talk to you about some other terms which are very, very important for you, so that you can understand when you are going from VIP coding to agent decoding, you are going to take care of these.

[01:00:44] - [01:01:01]

Dileep Karri: All right? So today's session will be a very whiteboard-driven session. It'll be a little less on demo. I want to give you that expectation up front, because I have to teach you these concepts before I get into the hands-on. Otherwise, you might feel lost. I'm laying the foundations right now. Everybody okay with that, right?

[01:01:01] - [01:01:04]

Dileep Karri: We will go to the demos tomorrow in detail. Today is...

[01:01:04] - [01:01:15]

Dileep Karri: Where we are going to set up the fundamentals. I will do some planning with you of how we should do the super complexity, and then we will start building it tomorrow.

[01:01:16] - [01:01:26]

Dileep Karri: Okay? So, that's how we are going to do this, alright? Now, let us go to the next concept, wherein I will talk about...

[01:01:28] - [01:01:30]

Dileep Karri: The second thing, specifications.

[01:01:35] - [01:01:41]

Dileep Karri: Okay? I will give you a difference between a conversation and a specification.

[01:01:45] - [01:01:46]

Dileep Karri: Okay? Here it goes.

[01:01:47] - [01:01:54]

Dileep Karri: Conversation is... You know what? You take your hand, like, you know, conversation is like your grandma's recipe.

[01:01:59] - [01:02:11]

Dileep Karri: Okay? What is it? Your grandma doesn't tell you, take one and a half teaspoon of sugar and add, like, a pinch of salt, not increasing a quarter of a spatula.

[01:02:12] - [01:02:17]

Dileep Karri: Does your grandma ever talk to you like that when explaining to you a recipe?

[01:02:17] - [01:02:20]

Dileep Karri: Or explaining to anybody a recipe?

[01:02:20] - [01:02:24]

Dileep Karri: Right? Your grandma will say, this much.

[01:02:24] - [01:02:26]

Dileep Karri: Okay? Then this much.

[01:02:26] - [01:02:28]

Dileep Karri: Then, this much.

[01:02:29] - [01:02:31]

Dileep Karri: That is a conversation.

[01:02:32] - [01:02:38]

Dileep Karri: Where you are saying, take chilis, take this, take that, take that, and make a recipe. That's a conversation.

[01:02:38] - [01:02:40]

Dileep Karri: Now, what is the specification?

[01:02:40] - [01:02:59]

Dileep Karri: When you go to MasterChef, okay, I hope MasterChef is a universal example. For those who don't know MasterChef, MasterChef is a competition where people have to kind of, you know, explain, you know, do a recipe. You should put one fourth of baking soda.

[01:03:00] - [01:03:03]

Dileep Karri: A drop of agar, agar.

[01:03:04] - [01:03:14]

Dileep Karri: Put your oven for 150 degrees, let it heat for 12 minutes, not 10, not 15. 12 minutes.

[01:03:14] - [01:03:22]

Dileep Karri: Then put in your cake for 7 minutes until you get a good golden glow on top of your cake.

[01:03:22] - [01:03:28]

Dileep Karri: That's when you pull out the cake, and then drizzle a dash of honey.

[01:03:29] - [01:03:31]

Dileep Karri: That is a specification.

[01:03:32] - [01:03:34]

Dileep Karri: Grandma, put flour.

[01:03:34] - [01:03:37]

Dileep Karri: Put baking soda.

[01:03:37] - [01:03:41]

Dileep Karri: You know, put this, put that, you know, put it in the oven.

[01:03:42] - [01:03:44]

Dileep Karri: Then take it out after some time.

[01:03:44] - [01:03:46]

Dileep Karri: Okay? Feel it.

[01:03:47] - [01:03:50]

Dileep Karri: When you feel it, you know it is done.

[01:03:50] - [01:03:51]

Dileep Karri: Okay?

[01:03:51] - [01:03:54]

Dileep Karri: That's exactly a conversation.

[01:03:55] - [01:04:13]

Dileep Karri: So, when you're doing kind of vibe coding, you are in a conversation where it is like a grandma's recipe, and grandma's recipe is not bad. Okay, don't think grandma's recipe is better. So, I took a particular example. Grandma's recipe is very good.

[01:04:14] - [01:04:18]

Dileep Karri: But the problem is, replication is going to be tricky.

[01:04:19] - [01:04:23]

Dileep Karri: You will not be able to replicate the grandma's recipe very well.

[01:04:24] - [01:04:28]

Dileep Karri: Okay? Specification is replicable.

[01:04:30] - [01:04:34]

Dileep Karri: Okay? So for agentic coding, you need to be specific.

[01:04:34] - [01:04:38]

Dileep Karri: You need to tell exactly what is it that you want.

[01:04:41] - [01:04:45]

Dileep Karri: Okay? What is the problem with specification? Can somebody tell me?

[01:04:46] - [01:04:50]

Dileep Karri: Again, go back to MasterChef. What is the problem with specification?

[01:04:59] - [01:05:02]

Dileep Karri: Actually, the problem with specification is...

[01:05:02] - [01:05:12]

Dileep Karri: Because you have so much elaborate steps to be precise and technical, any one step goes here and there, your recipe is gone.

[01:05:13] - [01:05:28]

Dileep Karri: Have you noticed this? When you are doing, like, a grandma's recipe, even if your specifications are here and there, your recipe comes good. It is not going to be a spoiled recipe, it is decent. But when you are going to a very precise dish like this.

[01:05:28] - [01:05:34]

Dileep Karri: Any small thing you miss here and there, your dish taste is off.

[01:05:34] - [01:05:52]

Dileep Karri: Okay? I have seen this because I have seen how my wife does baking, so she's very specific, a little bit, and I am more conversational. So, I go by... I do vibe cooking. Okay, my wife hates my cooking, because I do a lot of vibe cooking.

[01:05:52] - [01:06:00]

Dileep Karri: Right? I just... I feel everything, I put everything together, I took... look, I feel the smell, I feel the taste, and I say, wow, this is the dish.

[01:06:01] - [01:06:12]

Dileep Karri: She... that's why we made a pact that we will never go into the kitchen when other person is there, if either I am in kitchen or my wife is in the kitchen. Both of us together never do that.

[01:06:14] - [01:06:16]

Dileep Karri: Okay? Coming back.

[01:06:17] - [01:06:24]

Dileep Karri: So, that is, you know, Grandma's recipe, and specification is a MasterChef recipe.

[01:06:30] - [01:06:30]

Dileep Karri: Okay?

[01:06:32] - [01:06:42]

Dileep Karri: So, I'm not saying this is good, this is bad. I'm just saying this is a method, and that's the method. So, when you're going agentic specification.

[01:06:43] - [01:07:00]

Dileep Karri: is better, it will work better, but the problem is, in the specification, anything goes here and there. What would happen is, your dish is going to get completely spoiled. So, you have to be very careful in terms of this. So, the next part is...

[01:07:01] - [01:07:06]

Dileep Karri: How do you... Take care of this.

[01:07:07] - [01:07:16]

Dileep Karri: How do you take care that the specifications you make, at least I reduce the amount of errors that I'm trying to do?

[01:07:16] - [01:07:21]

Dileep Karri: How do I reduce this amount of errors that I'm trying to do with this specification?

[01:07:22] - [01:07:28]

Dileep Karri: For that, we need to understand a few more concepts, and I'm going to explain those concepts to you.

[01:07:29] - [01:07:34]

Dileep Karri: Okay? Everybody clear so far? Are we good? Everybody good? Yes? No?

[01:07:39] - [01:07:41]

Dileep Karri: Okay? Good, good, awesome.

[01:07:42] - [01:07:50]

Dileep Karri: So now we go into a little more depth of what are the different things that we are going to land up with.

[01:07:50] - [01:07:51]

Dileep Karri: Okay?

[01:07:51] - [01:07:57]

Dileep Karri: So... This section is, like, preemptive care.

[01:07:58] - [01:08:04]

Dileep Karri: So this section is like, what are the different ways my PISA can go wrong?

[01:08:04] - [01:08:07]

Dileep Karri: Okay? My pizza can become soggy.

[01:08:07] - [01:08:17]

Dileep Karri: my pizza can become too, you know, how do I call it? Chalky? Because it becomes very hard, it becomes very soft, it could get burnt.

[01:08:19] - [01:08:29]

Dileep Karri: It could, you know, taste funny. The sauces are... Off, it could be... Tasteless, it could be uncooked.

[01:08:29] - [01:08:30]

Dileep Karri: Okay?

[01:08:30] - [01:08:37]

Dileep Karri: So now, you can actually understand, okay, these are the things my PISA could go wrong.

[01:08:38] - [01:08:47]

Dileep Karri: And these are the processes I need to take care, so that my chances of me getting my PISA better.

[01:08:47] - [01:08:48]

Dileep Karri: is hype.

[01:08:50] - [01:08:58]

Dileep Karri: Okay? So, that's the first thing we have to do, and this part is called edge cases.

[01:09:01] - [01:09:05]

Dileep Karri: Okay? So what are edge cases, right?

[01:09:05] - [01:09:12]

Dileep Karri: So... I think this one, I can,

[01:09:14] - [01:09:18]

Dileep Karri: How many of you have ordered coffee in a Starbucks?

[01:09:21] - [01:09:24]

Dileep Karri: Okay? How many of you have ordered coffee in a Starbucks?

[01:09:24] - [01:09:27]

Dileep Karri: Have you seen these orders, okay?

[01:09:27] - [01:09:34]

Dileep Karri: A dash of cappuccino with a milk, of oat milk with a layer of almond with a foam.

[01:09:34] - [01:09:53]

Dileep Karri: Okay, some very weird offers. Not in India, thankfully, not that much, but I had gone to Ireland, where, listening to the orders, I got a FOMO that, you know, maybe I should give order like this. So, then I picked some 2-3 terms and threw it at that coffee barista.

[01:09:54] - [01:10:04]

Dileep Karri: Right? So now, what could happen is different things. When I am trying to, you know, do something.

[01:10:05] - [01:10:08]

Dileep Karri: Edge case is, for example, my PISA.

[01:10:09] - [01:10:10]

Dileep Karri: It has to be cooked.

[01:10:12] - [01:10:13]

Dileep Karri: It can go burnt.

[01:10:13] - [01:10:17]

Dileep Karri: So, there is a point between cooking and getting burnt.

[01:10:19] - [01:10:32]

Dileep Karri: Right? Do you understand this point? There is a point between a very well-cooked pizza, which is, like, roasted and getting burnt, and that is like an edge case, a boundary case, where I have to be very careful.

[01:10:33] - [01:10:35]

Dileep Karri: It's the fine line.

[01:10:35] - [01:10:39]

Dileep Karri: Okay? Now, what could be those edge cases?

[01:10:40] - [01:10:43]

Dileep Karri: Now, I made a recipe, okay?

[01:10:43] - [01:10:56]

Dileep Karri: For example, I used the latest new ovens for my recipe, but my friend is trying to do that recipe in an older oven, which tends to overheat.

[01:10:57] - [01:11:01]

Dileep Karri: What do you think will happen to the pizza? Will it get burnt, or will it be good?

[01:11:03] - [01:11:05]

Dileep Karri: Your pizza is going to get spoiled.

[01:11:06] - [01:11:25]

Dileep Karri: Okay? Now, that's the edge case. What is your edge case? Okay, I have to think about what my oven should be. Based on oven, I should give my temperature specifications, and I would say, okay, this is the temperature specifications I have to be worried about.

[01:11:26] - [01:11:33]

Dileep Karri: Okay, that is one edge case, that your oven is changing, your pizza could go wrong. So, edge case means...

[01:11:33] - [01:11:38]

Dileep Karri: How can... You are... app.

[01:11:39] - [01:11:41]

Dileep Karri: go wrong.

[01:11:44] - [01:12:02]

Dileep Karri: Right? So you preemptively think about how can your app go wrong, and then try to work reverse, and try to understand, okay, this is how my app could go wrong completely, and this is what I need to, you know, fix, this is what I need to, you know, be wary about.

[01:12:03] - [01:12:14]

Dileep Karri: So, let us say I'm taking my recipe. I will say, okay, in the recipes, mention the type of ovens

[01:12:15] - [01:12:23]

Dileep Karri: And, say for this type of oven, this should be the temperature. For this type of oven, this should be the temperature, etc, etc.

[01:12:24] - [01:12:42]

Dileep Karri: Now, for a normal oven, there could be one kind of specification. For a microwave, there could be one kind of specification. Somebody would make this pizza in a clay oven. There could be another kind of specification.

[01:12:42] - [01:12:53]

Dileep Karri: Right? You see, making a pizza which can work anywhere, a recipe which can work anywhere, are you able to understand how difficult it is?

[01:12:55] - [01:13:01]

Dileep Karri: Okay? So, that is exactly how you should think about edge cases.

[01:13:01] - [01:13:19]

Dileep Karri: Now, can you tell me that I can anticipate all the edge cases, and my recipe can work perfectly anywhere? On a scale of 0 to 100%, what is your confidence of, you know, making such a foolproof recipe of pizza?

[01:13:22] - [01:13:32]

Dileep Karri: Okay? I love the answers. A lot of people are saying you cannot make it because you cannot anticipate the amount of edge cases that could be there.

[01:13:32] - [01:13:42]

Dileep Karri: Okay? But what you can do, can you anticipate common age cases? You know for sure that these are the places where my visa could go wrong.

[01:13:43] - [01:13:50]

Dileep Karri: Right? So that is the edge case. So first, you have to map your edge cases.

[01:13:54] - [01:14:09]

Dileep Karri: Okay? You can say that these are some common edge cases. Most of the time, people make in older types of ovens, so for an older oven, lower temperature. I will make the change to my recipe.

[01:14:09] - [01:14:24]

Dileep Karri: Okay? So, edge cases is something I can survive. Now, think about this. I'll come to the application point of view. Suppose you have white-coded one application. Okay? You have shared... it's a mobile application.

[01:14:24] - [01:14:29]

Dileep Karri: Okay? Now, it is... so you think it'll work well on... iPhone.

[01:14:30] - [01:14:45]

Dileep Karri: Then, will it work well on all iPhones? No. Maybe in iPhone SE, in iPhone 7, in iPhone 5, somebody will have an iPhone Original, which Steve Jobs, you know, personally gifted to this person.

[01:14:45] - [01:14:48]

Dileep Karri: Right? On that, it could fail.

[01:14:49] - [01:14:51]

Dileep Karri: Because this is not meant for that.

[01:14:52] - [01:14:55]

Dileep Karri: You cannot anticipate all the edge cases.

[01:14:56] - [01:15:05]

Dileep Karri: But, most of the edge cases you can anticipate, and if you can anticipate most of these edge cases, you will be able to

[01:15:06] - [01:15:08]

Dileep Karri: Build a good application.

[01:15:08] - [01:15:13]

Dileep Karri: What I am teaching you right now is Engineering 101.

[01:15:13] - [01:15:14]

Dileep Karri: Okay?

[01:15:14] - [01:15:29]

Dileep Karri: earlier we talked about Tech 101, or Fundamentals of Tech during the different sessions we have gone through. What I'm talking about is Engineering 101, so that you can anticipate this and try to build this out.

[01:15:30] - [01:15:45]

Dileep Karri: So today, I'm going to talk to you about these edge cases and some other things through and through, so that when you see your apps, your wife-coded, or your coded applications behave weirdly, you know exactly what could be the problem.

[01:15:47] - [01:15:55]

Dileep Karri: Okay? So, this is the first thing that you have to understand, first thing that you need to get through, which is the edge cases.

[01:15:56] - [01:16:02]

Dileep Karri: Okay? After edge cases, what is the next thing that you need to understand? We will go through that.

[01:16:04] - [01:16:19]

Dileep Karri: So then, what I'll tell you also is, with edge cases, we will also kind of talk about how I will make my plan to surface the edge cases, okay? So that planning we will do when we come to that.

[01:16:19] - [01:16:21]

Dileep Karri: So, this is edge cases.

[01:16:22] - [01:16:27]

Dileep Karri: Then, I have the next thing to kind of look at.

[01:16:32] - [01:16:43]

Dileep Karri: authentication. I'm not going into features, per se, because I know features is something everybody knows, you know, how to figure out the features. I am trying to kind of say that

[01:16:44] - [01:17:01]

Dileep Karri: when you're trying to do an agent decoding, what are the things you need to be wary about? So, for that, the first thing is, edge cases is something you need to be wary about. Then, again, it's not a particular order, whatever is coming on top of my head, I'm trying to cover the same. Next is authentication.

[01:17:01] - [01:17:02]

Dileep Karri: Okay?

[01:17:03] - [01:17:07]

Dileep Karri: Why do you think authentication is important for your app?

[01:17:07] - [01:17:14]

Dileep Karri: Okay, so when you're building, why authentication becomes important? Can anybody tell me?

[01:17:23] - [01:17:26]

Dileep Karri: Everybody says security.

[01:17:26] - [01:17:35]

Dileep Karri: Okay, everybody says security, which is one of the things. The main reason you need authentication is personalization.

[01:17:41] - [01:17:46]

Dileep Karri: Okay? Personalization is important, that is why you do this authentication.

[01:17:48] - [01:17:58]

Dileep Karri: Okay? So, mainly in this, you do authentication, which is personalization, that is what you try to do, because suppose you are reading a book app.

[01:17:58] - [01:18:02]

Dileep Karri: Okay? And you are at page 27, and you close the app.

[01:18:03] - [01:18:17]

Dileep Karri: When you come back, how will the app know that you are on page 27? Or when you open your laptop and open the same app, you are on page 27. So, authorization, authentication helps in personalization.

[01:18:18] - [01:18:22]

Dileep Karri: Okay? Here, little technical, bear with me.

[01:18:22] - [01:18:25]

Dileep Karri: Without authentication also, it can work.

[01:18:26] - [01:18:29]

Dileep Karri: Okay, without authentication also, your app will work.

[01:18:29] - [01:18:36]

Dileep Karri: But you use something called local storage. How many of you in your webcoding apps have seen this?

[01:18:37] - [01:18:38]

Dileep Karri: local storage.

[01:18:40] - [01:18:42]

Dileep Karri: How many of you have seen this local storage?

[01:18:43] - [01:18:50]

Dileep Karri: Okay? So local storage means that it is present inside your own application.

[01:18:51] - [01:19:04]

Dileep Karri: Okay? For some reason, you shut down the app, you deleted the app for some reason, this local storage goes away, and when you open the app, it does not remember.

[01:19:07] - [01:19:11]

Dileep Karri: Especially happens in terms of system crashes.

[01:19:13] - [01:19:16]

Dileep Karri: In a system crash, whenever there is

[01:19:18] - [01:19:29]

Dileep Karri: you have not yet authenticated, etc, all that. When your system crashes, you does not, remember, and that's where local storage doesn't come into play.

[01:19:30] - [01:19:32]

Dileep Karri: Okay, so that's why,

[01:19:32] - [01:19:40]

Dileep Karri: the authorization is important. So, sometimes, even if you don't understand this point, it's okay. For those who understand, it's a bonus.

[01:19:40] - [01:19:54]

Dileep Karri: Basically, what I'm trying to say is authorization is not just security, it is so that your data, your thing is present or stored in a separate place, so that when you go back into the software, and when you log back in.

[01:19:55] - [01:19:57]

Dileep Karri: That comes back.

[01:19:57] - [01:20:01]

Dileep Karri: And therefore, Authorization is important.

[01:20:01] - [01:20:05]

Dileep Karri: And, one way of using authorization

[01:20:05] - [01:20:09]

Dileep Karri: is, if you're using Replit, Replit has something called Replit Auth.

[01:20:10] - [01:20:16]

Dileep Karri: Okay, it can handle it itself, or you can use superbase authorization itself.

[01:20:19] - [01:20:22]

Dileep Karri: Which, anyways, happens through edge functions.

[01:20:24] - [01:20:27]

Dileep Karri: Now, don't ask me what is an edge function. For now, just take it.

[01:20:29] - [01:20:31]

Dileep Karri: But if I go into edge function, it's going to be...

[01:20:31] - [01:20:49]

Dileep Karri: much deeper. Maybe tomorrow I'll talk about edge functions, but that is the second thing you need to understand, that authentication is important. Now, when you are doing agentic coding, authentication always builds the layer of friction, so build your app fully.

[01:20:49] - [01:20:58]

Dileep Karri: At least to the point you kind of want to hand it over to a user, then you build the authentication.

[01:21:01] - [01:21:23]

Dileep Karri: Okay? So that you are testing, you know, it is sometimes irritating that whenever you want to test again, it'll ask you to log in, again, you have to log in, then you have to check everything, you have to put the features, etc. So, first, get your... build your app without authorization, make it the last feature you can build before you push it to the user.

[01:21:23] - [01:21:37]

Dileep Karri: That way, you don't have to be... take the pain of doing this. This is a process that I follow, again, up to you. There is no hard and fast rule about this. I'm just sharing this with you so that you can incorporate it.

[01:21:41] - [01:21:43]

Dileep Karri: Okay? So that is authorization.

[01:21:46] - [01:21:53]

Dileep Karri: Or authentication, like that. Again, authentication, authorization, the way is authentication means...

[01:21:53] - [01:21:57]

Dileep Karri: Okay, let me explain authentication and authorization. I see a lot of confusion about that.

[01:21:57] - [01:22:04]

Dileep Karri: Okay? A non-food example, okay, so that I know a lot of people are hungry. A non-food example.

[01:22:05] - [01:22:07]

Dileep Karri: Okay? I go to a cinema.

[01:22:09] - [01:22:12]

Dileep Karri: Okay? Everybody authentication.

[01:22:13] - [01:22:16]

Dileep Karri: With a ticket, can enter the cinema.

[01:22:17] - [01:22:22]

Dileep Karri: Alright, but will I sit in the... Front place?

[01:22:22] - [01:22:24]

Dileep Karri: Luxury Circle.

[01:22:28] - [01:22:30]

Dileep Karri: You know, sleeping parts.

[01:22:32] - [01:22:45]

Dileep Karri: My friends abroad, outside India may be wondering, what do you mean, sleeping pods inside cinemas? We have that in India. In India, we have a sleeping recliner where you can sleep and watch the movie.

[01:22:46] - [01:22:48]

Dileep Karri: Okay? Highest ticket possible.

[01:22:49] - [01:22:55]

Dileep Karri: Right? Now, this is authentication, where I am entering the cinema.

[01:22:55] - [01:23:00]

Dileep Karri: Where I can sit is authorization.

[01:23:03] - [01:23:10]

Dileep Karri: Authorization means you have permission only till here. Okay, you have permission here, or you have permission here.

[01:23:14] - [01:23:19]

Dileep Karri: Okay? That is exactly what authentication and authorization.

[01:23:21] - [01:23:27]

Dileep Karri: Alright, so now that we have authentication and authorization.

[01:23:28] - [01:23:35]

Dileep Karri: Okay? Now, don't tell me, explain me what does seat number mean, okay? Analogy means it is to help you explain a concept.

[01:23:36] - [01:23:45]

Dileep Karri: Okay? Just keep it at that. Now, what does seat number mean? What does the, you know, screen mean? What does the stage mean? Etc, all that.

[01:23:46] - [01:23:47]

Dileep Karri: Okay.

[01:23:48] - [01:23:51]

Dileep Karri: So, in your app.

[01:23:51] - [01:24:02]

Dileep Karri: Authorization gets you... authentication gets you inside the app. Authorization lets you access the features. You might have an admin authorization or a user authorization.

[01:24:04] - [01:24:04]

Dileep Karri: Okay?

[01:24:07] - [01:24:13]

Dileep Karri: All right, so that is with respect to this, which is you are, you know.

[01:24:13] - [01:24:20]

Dileep Karri: thing, and of course, also on the database setup. You have the basic database that you are always working with.

[01:24:21] - [01:24:26]

Dileep Karri: Now, there is a curious problem you might hit while white coding.

[01:24:28] - [01:24:32]

Dileep Karri: Okay? And that curious problem that you might hit by coding

[01:24:33] - [01:24:40]

Dileep Karri: is this curious creature called rate limits. How many of you have ever hit rate limits? Say me?

[01:24:41] - [01:24:45]

Dileep Karri: El... If you have hit, rate limits.

[01:24:46] - [01:24:52]

Dileep Karri: Okay? Now, you might be thinking of rate limits in terms of cloud usage.

[01:24:52] - [01:24:57]

Dileep Karri: Okay? You might think of rate limits in terms of cloud usage.

[01:24:57] - [01:25:03]

Dileep Karri: But the rate limits can hit you very, very differently, and I'll explain how with respect to rate limits.

[01:25:05] - [01:25:13]

Dileep Karri: Rate limits is the amount of food you can eat when guests are around, and you have prepared a limited food.

[01:25:13] - [01:25:18]

Dileep Karri: Okay? Guests have come? There are 15 guests in your home.

[01:25:18] - [01:25:22]

Dileep Karri: And, you know, your spouse has made the food for you.

[01:25:23] - [01:25:39]

Dileep Karri: You will be already given instructions. Only two pieces of pizza for you. Don't dare take the third piece of pizza. It is for the guests. Anybody face that? Where, at least with your mother saying that, you know, guests are here.

[01:25:39] - [01:25:43]

Dileep Karri: Limited food, okay? It's a little Indian culture thing.

[01:25:43] - [01:25:46]

Dileep Karri: When guests come, right, your quantity gets limited.

[01:25:47] - [01:25:51]

Dileep Karri: Because first they will eat, and then you can.

[01:25:51] - [01:25:56]

Dileep Karri: So, your mother has put a rate limit on your food.

[01:25:57] - [01:26:04]

Dileep Karri: Once the guests leave, maybe, okay? But as long as the guests are there, You have got rate limits.

[01:26:04] - [01:26:08]

Dileep Karri: Similarly, apps, okay? APIs.

[01:26:09] - [01:26:17]

Dileep Karri: Now, everybody thinks API means, okay, cloud usage limit reached. That's not what I'm talking about.

[01:26:18] - [01:26:26]

Dileep Karri: Cloud usage limit is not what I'm talking about. I'm talking about the fact where I am, you know.

[01:26:26] - [01:26:30]

Dileep Karri: using an API. For example, I am using Levin Labs API.

[01:26:32] - [01:26:37]

Dileep Karri: Okay? And Level Labs API at a particular tier level.

[01:26:38] - [01:26:43]

Dileep Karri: Says, you can call me, say, 20 times, in a second.

[01:26:47] - [01:26:52]

Dileep Karri: Okay, but suddenly, 100 people came.

[01:26:53] - [01:26:59]

Dileep Karri: Then, 20 people got the chance, but other 20 people, 80 people, it will fail.

[01:27:02] - [01:27:06]

Dileep Karri: Okay? So that is rate limit, throttling, etc, which could happen.

[01:27:08] - [01:27:13]

Dileep Karri: And this happens a lot when you use a free API.

[01:27:13] - [01:27:18]

Dileep Karri: Okay, or even the paid API also, they mention rate limits.

[01:27:18] - [01:27:36]

Dileep Karri: Just because you're paying for the API, you cannot use it directly. They do good amount of rate limits. Can you give me an example of a rate limit which has happened, very re... not so recently, maybe in one to two months, a rate limit kind of happened across

[01:27:38] - [01:27:39]

Dileep Karri: Okay?

[01:27:39] - [01:27:44]

Dileep Karri: Somebody has already given the answer, but let me just look at it.

[01:27:44] - [01:27:54]

Dileep Karri: I think the first person gave the answer, which is about Anthropic. Anthropic Rate Limited Open Claw. Have you remember? Anthropic Rate Limited Open Claw.

[01:27:55] - [01:28:04]

Dileep Karri: Right? That means you cannot keep calling with this thing. They rate-limited it, and that is what has happened. So...

[01:28:04] - [01:28:08]

Dileep Karri: Now, this type of error, what could happen is.

[01:28:08] - [01:28:24]

Dileep Karri: You can, you know, think about the API, you think you're paying for it, you think everything is fine, but there could be a lot of rate limits which you don't know, so be careful of studying.

[01:28:25] - [01:28:42]

Dileep Karri: Okay, now you don't even have to study the documentation. All documentation has become very agent-friendly. Have you noticed this? Every documentation has become agent-friendly right now. It is no longer human-friendly, okay? Everybody has made it agent-friendly. Let me give you an example.

[01:28:43] - [01:28:45]

Dileep Karri: Let me go to Levin Labs API.

[01:28:54] - [01:28:57]

Dileep Karri: Okay, this is Eleven Labs documentation.

[01:28:57] - [01:29:01]

Dileep Karri: Hopefully, this will give me this. You see this copy page?

[01:29:02] - [01:29:05]

Dileep Karri: Right? This is copy-page. When I click here.

[01:29:05] - [01:29:13]

Dileep Karri: You see here, open in Cloud, open in chat GPT, connect to cursor, connect to, cloud code.

[01:29:13] - [01:29:29]

Dileep Karri: Okay, so when an agent comes, based on the agent which is hitting this page, the prompt opens up, and everything kind of goes like this. So, for example, see the entire documentation site as marked down for LMMs.

[01:29:29] - [01:29:33]

Dileep Karri: So when I look at this, this is the... this is what my agent reads, not you.

[01:29:34] - [01:29:45]

Dileep Karri: Okay, this is what your agent reads when you kind of... when they come and hit your, you know, this thing. This is what your, agent, kind of reads.

[01:29:47] - [01:29:57]

Dileep Karri: Okay, so that's what is agent-friendly documentation. So the way the formatting is done, everything is done, that is the documentation overall.

[01:29:58] - [01:30:03]

Dileep Karri: Okay, so rate limits is something that you have to be wary about.

[01:30:04] - [01:30:10]

Dileep Karri: CLIs we will cover sometime later, not in the scope of today. We will cover CLI sometime other time.

[01:30:11] - [01:30:19]

Dileep Karri: Okay? Now, the other main thing that we will do is error handling.

[01:30:24] - [01:30:28]

Dileep Karri: Okay? Now, error handling is the other thing that we'll have to do.

[01:30:29] - [01:30:31]

Dileep Karri: Now, what do you mean by error handling?

[01:30:32] - [01:30:35]

Dileep Karri: Error handling is unexpected situation.

[01:30:36] - [01:30:40]

Dileep Karri: Or, in terms of questions, out of syllabus question.

[01:30:41] - [01:30:47]

Dileep Karri: Right? How many of you have frozen in an examination because you got an out-of-service question?

[01:30:50] - [01:30:51]

Dileep Karri: Okay?

[01:30:51] - [01:31:00]

Dileep Karri: Out of syllabus question, again, a little Indian reference, but I think internationally, also, you will understand, right? Something out of syllabus. You haven't prepared.

[01:31:00] - [01:31:05]

Dileep Karri: Oh, this is also there in the syllabus. I didn't know that this topic ever existed.

[01:31:06] - [01:31:12]

Dileep Karri: Right? That is the out-of-syllabus question that I was telling.

[01:31:12] - [01:31:15]

Dileep Karri: Something that you have not read, you don't know.

[01:31:15] - [01:31:23]

Dileep Karri: So, think of error handling as your app coming to a situation where you did not specify how it should react.

[01:31:24] - [01:31:40]

Dileep Karri: Okay? Now, you know, coming back to the guest example, you will be... there's an etiquette that is mentioned at home. Your mother will tell you, see, the guest will come, the guest will say, hey, have it with us, politely decline.

[01:31:41] - [01:31:47]

Dileep Karri: Okay? So, situation, guest will ask you to have, politely decline.

[01:31:47] - [01:31:51]

Dileep Karri: Okay? Now, the problem is...

[01:31:52] - [01:32:04]

Dileep Karri: You know, the guest left the plate, and went away. You, your mother did not tell you, okay, when the guest left the plate, what should you do with the leftover?

[01:32:04] - [01:32:06]

Dileep Karri: Okay, so you think, okay, I can have it.

[01:32:07] - [01:32:13]

Dileep Karri: So you try to take that and pop it in your mouth, and suddenly you get a stare.

[01:32:13] - [01:32:15]

Dileep Karri: Error handling.

[01:32:15] - [01:32:19]

Dileep Karri: You try your mother did not specify, you landed into an error.

[01:32:20] - [01:32:26]

Dileep Karri: Okay? That is error handling. Unspecified, unthought-about situation.

[01:32:26] - [01:32:44]

Dileep Karri: So, when your app faces a situation it cannot handle, it will freeze, or it will go into a blank screen, it will give... it will not know what to do. This entire app will just give a screen, and you don't know what is happening. So, it is an unknown error.

[01:32:46] - [01:32:49]

Dileep Karri: So, think of it like this.

[01:32:50] - [01:32:54]

Dileep Karri: When your guest asks if you can take the food, politely say no.

[01:32:55] - [01:32:57]

Dileep Karri: If your guest asks.

[01:32:57] - [01:33:15]

Dileep Karri: You know, here is a chocolate, politely say no. If your guest insists again, second time, and third time, then reluctantly take it. Don't jump and grab it from their hand. When you act, at least act reluctantly and take that chocolate from that guest.

[01:33:16] - [01:33:17]

Dileep Karri: Okay?

[01:33:17] - [01:33:20]

Dileep Karri: All kind of errors are handled.

[01:33:20] - [01:33:30]

Dileep Karri: Then, you say, Anything that you don't know how to act, ask me. That is mother's final exception.

[01:33:31] - [01:33:40]

Dileep Karri: Okay? Anything you don't know, you know, what is, there, ask the mother. So that is where... that is error handling.

[01:33:40] - [01:33:47]

Dileep Karri: So, you'd say, okay, so what you do in the app is error 1, do this, error 2,

[01:33:47] - [01:33:49]

Dileep Karri: Do this, error 3.

[01:33:50] - [01:34:02]

Dileep Karri: handle like this. Now, any kind of error that is not in the specification, you will say, okay, you know, unspecified error. So, when you go to applications.

[01:34:02] - [01:34:13]

Dileep Karri: Have you ever come across this quirky screen, where not found, sorry, you know what, it is not you, it is we at fault, some very quirky things people put up.

[01:34:13] - [01:34:17]

Dileep Karri: Right? That is, like, it is an error, but they're handling it.

[01:34:17] - [01:34:34]

Dileep Karri: But an error where they are not showing nothing and absolutely a blank screen or anything like that, you don't even know what is happening, that is an unspecified error, and therefore, you should ensure that in your specification, you are mentioning error handling very well.

[01:34:34] - [01:34:55]

Dileep Karri: As to if this is the error, do this. If this is the type of error, do this. If this is the type of error, do this. If your user is putting garbage into the, you know, entry thing, like, you know, just typing things, say that, you know, whatever you have entered seems to be invalid, can you recheck and enter again? Etc.

[01:34:55] - [01:35:01]

Dileep Karri: Right? So that is the kind of error handling that you have to do.

[01:35:02] - [01:35:08]

Dileep Karri: Alright? So, we will now summarize the few things that we have learned.

[01:35:08] - [01:35:12]

Dileep Karri: Okay? Everybody clear with everything, right? I am...

[01:35:12] - [01:35:30]

Dileep Karri: you know, purposefully keeping the analogies. I'm not giving a perfect explanation, I'm giving an explanation that works. If you want to go deeper, feel free to go deeper and understand all of that. I want you to give you a decent explanation so that you can understand those concepts.

[01:35:30] - [01:35:37]

Dileep Karri: Okay, so you have edge cases, Where things could go wrong.

[01:35:43] - [01:35:46]

Dileep Karri: Edge cases are where things could go wrong.

[01:35:46] - [01:35:49]

Dileep Karri: And error handling is...

[01:35:52] - [01:35:54]

Dileep Karri: When things go wrong, what to do?

[01:36:03] - [01:36:08]

Dileep Karri: Okay, edge cases, things could go wrong, but if things go wrong, what to do? That is error handling.

[01:36:08] - [01:36:14]

Dileep Karri: Okay? Then we have rate limits, and we have authentication.

[01:36:28] - [01:36:36]

Dileep Karri: Okay? So these are the four things that we need to think about, we need to handle when we are writing this specification.

[01:36:37] - [01:36:42]

Dileep Karri: Okay, edge cases, error handling, rate limits, and authentication.

[01:36:42] - [01:36:47]

Dileep Karri: Now, what we'll do is, we will try to make a quick plan of

[01:36:47] - [01:36:56]

Dileep Karri: super complexity with this. So, let me give you a quick overview of wind surf, what it is, and everything. So, what you need to understand is.

[01:36:57] - [01:37:00]

Dileep Karri: Okay? In the beginning, there were two.

[01:37:00] - [01:37:13]

Dileep Karri: Okay? So I'll give you the... let me talk to you about the ODC, the Iliad, the Mahabharata of IDs, okay? Let me tell you the ODC, Iliad, and the Mahabharata of IDEs.

[01:37:14] - [01:37:17]

Dileep Karri: the Epic of ideas. In the beginning.

[01:37:17] - [01:37:28]

Dileep Karri: The IDE that people loved, people used, was VS Code. It is the integrated development environment, that is where you will do the agentic coding.

[01:37:28] - [01:37:32]

Dileep Karri: Okay, that is what this ID is, Integrated Development Environment.

[01:37:32] - [01:37:39]

Dileep Karri: So, in the beginning, there was VS Code. So, people... this VS Code was available open source.

[01:37:40] - [01:37:50]

Dileep Karri: So, people could make... forks of it, and create their own companies. So, one fork of it was Cursor.

[01:37:51] - [01:37:53]

Dileep Karri: Another fourth of it was wind surf.

[01:37:56] - [01:38:01]

Dileep Karri: There are others, like Kiro by Amazon, there is something called

[01:38:02] - [01:38:09]

Dileep Karri: Trey by ByteDance, you know, ByteDance also has their own IDE. There is one more... there are multiple ones that are available.

[01:38:11] - [01:38:17]

Dileep Karri: So, now, what has happened is, Wind Surf had a very curious journey.

[01:38:17] - [01:38:31]

Dileep Karri: Windsor went ahead, and then the Google purchased the founders with a core team. So there were 100 people, some 8 to 10 people, the core team, got acquired by Google.

[01:38:32] - [01:38:41]

Dileep Karri: Along with the Windsurf IP, so... till then. So they took this version of Windsurf, and then they created Anti-Gravity.

[01:38:44] - [01:38:56]

Dileep Karri: Okay? So, anti-gravity is the version of wind surf that Google purchased at one point in time. But now, out of 8 to 10 people, there are some 70 to 80 people left.

[01:38:57] - [01:39:00]

Dileep Karri: Okay, there are some 70 to 80 people which are left.

[01:39:00] - [01:39:06]

Dileep Karri: They... continued to build wind surf, so they kept on building wind surf.

[01:39:08] - [01:39:13]

Dileep Karri: Then, what happened? There is this company called Cognition.

[01:39:16] - [01:39:22]

Dileep Karri: who built this autonomous agent called Devin, they acquired Windsurf.

[01:39:22] - [01:39:29]

Dileep Karri: Okay? Now, this Windsurf went ahead, and they became Windsurf 2.0.

[01:39:30] - [01:39:33]

Dileep Karri: with Devon integrated.

[01:39:34] - [01:39:47]

Dileep Karri: So, it's a convergence. Devon and Windsurf became integrated. Now, if you didn't understand the story, don't worry, it's complicated, but basically, Windsurf was a company of, say, 100 people.

[01:39:47] - [01:40:03]

Dileep Karri: 20 people were bought by Google, and they made anti-gravity. Then those rest, 80 people, they continued developing Windsurf, but another company, Cognition, with Devon, a software agent, they acquired Windsurf, and Windsurf

[01:40:04] - [01:40:07]

Dileep Karri: went on to developing Windsurf 2.0.

[01:40:08] - [01:40:13]

Dileep Karri: So, what we're going to learn a little bit is about Windsurf 2.0.

[01:40:13] - [01:40:30]

Dileep Karri: Okay? It has commonalities with anti-gravity, but it is its own thing, because it's a fork, which, like, windsurf forked itself into two. One became anti-gravity, other became winds of 2.0. There are some similarities, but they are...

[01:40:30] - [01:40:34]

Dileep Karri: Very different, or quite... at least they try to be quite different from each other.

[01:40:34] - [01:40:48]

Dileep Karri: Alright, so now let us get into Windsurf and show you how to download and install Windsurf. I'm not going to teach you, okay? That is something which you can Google, you can do Perplexity, you can do anything else.

[01:40:48] - [01:40:54]

Dileep Karri: Okay? Why I'm showing this is, I am showing you different types of PISA.

[01:40:55] - [01:41:11]

Dileep Karri: Now, you want to use different... you want to figure out which pizza to use, you taste the pizza and you understand. Don't ask me and tell me, okay, Dilib, of all the pizzas you taught, tell me what is the best pizza, I'm going to use that. Compare this pizza to that pizza, etc. I'm not going to do that.

[01:41:11] - [01:41:17]

Dileep Karri: I will tell you, okay, this is how this pizza is different from that pizza. This is the items.

[01:41:17] - [01:41:20]

Dileep Karri: Take it, taste it, or leave it.

[01:41:21] - [01:41:22]

Dileep Karri: Clear, everybody?

[01:41:25] - [01:41:49]

Dileep Karri: Okay? So now, we will get into Windsurf 2.0. The reason why we're showing this, and you'll see more of it tomorrow, is because it's a... the paradigm is slightly different, and the way they've orchestrated it is different. Maybe some of you would like maybe Windsurf better

than Cursor or other items, so that's why I thought we should definitely show Windsorf to all of you.

[01:41:50] - [01:41:59]

Dileep Karri: So, let me... installation, I'm not going to go into it. I will not directly show and give you a quick overview of Windsurf.

[01:41:59] - [01:42:03]

Dileep Karri: Okay? And we'll get started with the planning of everything.

[01:42:16] - [01:42:27]

Dileep Karri: Okay, so this is Windsorf. It would look something like this. So, if you have used Cursor or any of the platforms before.

[01:42:27] - [01:42:46]

Dileep Karri: everyone would look very similar, because everyone is based out of Visual Studio Code only. So, you will find some few changes, UI, this thing, but everything like this, but it is mostly, like, anti-gravity only. So, if you have used anti-gravity before, it is very similar to anti-gravity.

[01:42:47] - [01:42:52]

Dileep Karri: Okay? So, I have shared it, yeah. I'm... you should be able to see it now.

[01:42:53] - [01:42:59]

Dileep Karri: Okay, now I want to generate a new project, okay? So I'll click on generate a new project.

[01:43:01] - [01:43:04]

Dileep Karri: And then, I will say select folder.

[01:43:07] - [01:43:12]

Dileep Karri: And, okay, let me share the entire screen now, so that it'll be easier.

[01:43:18] - [01:43:28]

Dileep Karri: Okay, so what I'll say is either I'll select the folder, or create a new folder. So, did I create SuperPlexity? No. Okay, so I'll create a new folder.

[01:43:29] - [01:43:31]

Dileep Karri: I call it super...

[01:43:49] - [01:43:52]

Dileep Karri: For some reason, my keyboard is not working.

[01:43:53] - [01:43:57]

Dileep Karri: some error... Okay.

[01:43:58] - [01:44:09]

Dileep Karri: Anyways, you had to create a new folder, and you had to do this. So, maybe I'll stop share and see if that is helping, just give me a second. I'll explain what I have done. I'm just...

[01:44:09] - [01:44:21]

Dileep Karri: creating the new project, that's all, I'm not doing anything else. So I'm opening this thing, I'm creating a new folder, and I'm... now it is working.

[01:44:25] - [01:44:27]

Dileep Karri: So I'm creating super complexity.

[01:44:28] - [01:44:32]

Dileep Karri: I select the folder, I select this folder.

[01:44:34] - [01:44:35]

Dileep Karri: Okay?

[01:44:37] - [01:44:40]

Dileep Karri: Right. So, let me share the screen again.

[01:44:41] - [01:44:46]

Dileep Karri: I have just created the folder, I have not done anything fancy, just FYI.

[01:44:48] - [01:44:52]

Dileep Karri: So now I'll open folder, I'm going to Downloads.

[01:44:53] - [01:44:55]

Dileep Karri: I'm going to the...

[01:44:55] - [01:45:04]

Dileep Karri: Superplexity, there is nothing over here. I'll open it, and I do this, and I'll say, yes, I trust the authors.

[01:45:04] - [01:45:11]

Dileep Karri: Okay, and I am here. So this is my entire wind surf, which will, you know, look like this.

[01:45:19] - [01:45:26]

Dileep Karri: Okay, so now this is in, wind surf, okay? What you need to understand is.

[01:45:26] - [01:45:40]

Dileep Karri: In Windsurf, the agent is called Cascade, okay? Cascade is the name of the agent, so we will say Code with Cascade, so I'll just press Command-L.

[01:45:40] - [01:45:52]

Dileep Karri: Okay, the command is Command-L. There are, you know, shortcuts. So, cascade is like, you know, starting a new agentic chat and working with this.

[01:45:52] - [01:46:07]

Dileep Karri: Okay? Similar to Composer in cursor, anti-gravity also has an agent mode. Very, very similar. Everybody works the same way. It is like a cascade, this thing, so it is like kicking a new change over on.

[01:46:07] - [01:46:19]

Dileep Karri: Now, what is cool I like in Windsurf, which I will demonstrate in detail tomorrow, because I understood that I wanted to show it on a free plan, but I understood

[01:46:20] - [01:46:22]

Dileep Karri: There is something called Arena.

[01:46:23] - [01:46:30]

Dileep Karri: Okay? We can work on Arena. I'll show you Arena also a little bit sometime. So, what I'll do is...

[01:46:30] - [01:46:35]

Dileep Karri: I will say... Make a simple...

[01:46:39] - [01:46:41]

Dileep Karri: repo in GitHub.

[01:46:42] - [01:47:02]

Dileep Karri: So what I'm saying is, I'm doing a simple repo in GitHub. Everything, skills, MCP servers, all of that would work in this and Visual Studio. Everybody has the same features. It is not going to be a different feature altogether. The orchestration is going to be different, that's all.

[01:47:03] - [01:47:14]

Dileep Karri: Okay, so now I will say, create an empty repo. Okay, so I'll say, create an empty repo. So here, now the question could be, how do I connect my GitHub?

[01:47:14] - [01:47:19]

Dileep Karri: Okay? Very simple, you just have to say, this is my GitHub.

[01:47:19] - [01:47:23]

Dileep Karri: you know, I am a non-technical person, help me connect.

[01:47:23] - [01:47:29]

Dileep Karri: Okay? So now it is asking me what should the repo be named? I'll call it SuperPlexit.

[01:47:33] - [01:47:35]

Dileep Karri: Okay, then I'll say run.

[01:47:41] - [01:47:56]

Dileep Karri: So, my GitHub repo also is created. So, everything, Visual Studio, all people have the same agentic feature. Okay, so now here, what we'll do is we'll set up something to do agentic features overall.

[01:47:56] - [01:48:03]

Dileep Karri: Okay, I have the GitHub feature. The good part I like about this is...

[01:48:03] - [01:48:11]

Dileep Karri: You know, what I can do over here... is...

[01:48:11] - [01:48:22]

Dileep Karri: Here, I can choose multiple models, okay? So, the... for a look about this thing, adaptive means that it will automatically balance

[01:48:22] - [01:48:35]

Dileep Karri: Between quality and cost. So, it will choose the model based on how it works. Okay, so sorry, I'm not able to increase the font size. Yeah, a little bit I cannot do beyond this.

[01:48:35] - [01:48:40]

Dileep Karri: So, when I click on Adapt To, okay, look at this. Adapt to.

[01:48:40] - [01:48:49]

Dileep Karri: It is showing me \$0.5 per 1 million tokens, so what it does is, it balances quality and cost.

[01:48:49] - [01:48:57]

Dileep Karri: So, based on the input I'm giving, it will decide that is the quality good, not good, and based on that, it will give you the output.

[01:48:58] - [01:49:01]

Dileep Karri: that is adaptive. Then, it gives...

[01:49:01] - [01:49:15]

Dileep Karri: SWE 1.6 Fast, which is the Windsorf's coding model. Like, Composer is cursor's coding model, SWA 1.6 Fast is Windsorf's own coding model.

[01:49:15] - [01:49:26]

Dileep Karri: So, they are giving their own coding model that is here. So, if you see here, right, what it shows you is the cost. So, it is the cheapest model available.

[01:49:26] - [01:49:36]

Dileep Karri: Over here is 0.3 per 1 million tokens, and 0.03 for 1 million tokens in terms of this thing, and 1.5 for 1 million tokens.

[01:49:37] - [01:49:55]

Dileep Karri: Okay, then Kimi 2.6, Kimi K 2.6, etc. is also available. This is available freely. So on the free version of Windsurf, you can use Kimi K 2.6 very easily, and it is very similar to Claude Code. Okay, so you don't have to worry. It is quite similar to Claude Code overall.

[01:49:56] - [01:50:05]

Dileep Karri: Then you have got DeepSeek, which is slightly costly, and if you go down, you have Claude Opus, which is very costly towards the end.

[01:50:06] - [01:50:22]

Dileep Karri: Okay? So, these are the multiple models available. Now, you can decide which model you want to use. I will use Adaptive to start with, okay? I will start with Adaptive, but if I know that, you know, you are trying to work with,

[01:50:23] - [01:50:40]

Dileep Karri: you know, different repositories, and you are making a very, you know, stringent plan and require a lot of thinking, at that point in time, you might have to use the Claude code, okay? But the Cloud code, the way

[01:50:40] - [01:50:49]

Dileep Karri: Windsurf has done is, they don't have a integration with this, they ask you to give the API key, and you have to connect the API key.

[01:50:50] - [01:50:59]

Dileep Karri: Okay? This cannot happen in anti-gravity, don't think, you know, adaptive does not exist in anti-gravity, it's a windsurf feature.

[01:50:59] - [01:51:15]

Dileep Karri: Okay? These models, again, SW1.6 is a windsurf model, it will not be present in anti-gravity. Okay, so these are some of things. GPT 5.5 is also present, where it is giving, you know, adaptive is the lowest cost.

[01:51:15] - [01:51:17]

Dileep Karri: Gbt 5.5 is higher.

[01:51:17] - [01:51:41]

Dileep Karri: Okay? So, what we will do is, we will take a pause here. We have some more announcements to do, so we will do that, right? Tomorrow, I will pick it from here, because I believe that in case a few new people join us tomorrow, they should be able to see the planning phase also. So tomorrow, I will plan out SuperPlexity, and also execute it, build it.

[01:51:41] - [01:51:49]

Dileep Karri: And I will also show it to you on Devon, what happens. So, Devon, with this, we are going to see tomorrow.

[01:51:49] - [01:52:09]

Dileep Karri: Okay? Recording will take time, okay? It is going to take time. Tomorrow, I'll cover WorkTree, as well as everything overall. So, we have something special for you, okay? We have a new initiative that we have come forth with, and for that, I would love to, you know, call,

[01:52:09] - [01:52:15]

Dileep Karri: My very young friend Sashwad, who is a new addition to the team.

[01:52:15] - [01:52:27]

Dileep Karri: Right? And, he has, conceptualized it and worked independently on it. So, in front of all of you, I would like to appreciate, Sashwat,

[01:52:27] - [01:52:35]

Dileep Karri: To kind of, you know, appreciate him for the work. Again, young guy, thought a mistake, either of the whole guy, might make some few mistakes.

[01:52:35] - [01:52:50]

Dileep Karri: please pardon him, have mercy on him, right? And, Karthik and Sashvath have been working hard on this initiative, so we wanted to give Shashwat, Eric Sharsvat, they're saying, good luck to you, okay?

[01:52:52] - [01:52:52]

Shashwat Outskill: President.

[01:52:52] - [01:52:57]

Dileep Karri: Over to you, great work, really excited for this new initiative. Go ahead.

[01:52:57] - [01:52:58]

Shashwat Outskill: Thank you, thank you so much, Dilip.

[01:52:58] - [01:53:03]

Shashwat Outskill: So, folks, how do you like the recipe? Are you cooking something or not?

[01:53:05] - [01:53:06]

Shashwat Outskill: So, ready to cook or not?

[01:53:09] - [01:53:12]

Shashwat Outskill: Yes, I can see yes in the chat. Already started cooking.

[01:53:13] - [01:53:14]

Shashwat Outskill: Nice, nice.

[01:53:15] - [01:53:18]

Shashwat Outskill: Really nice. So, if we talk about, you know.

[01:53:18] - [01:53:28]

Shashwat Outskill: cooking. So, we all know that we have been done with the cohort and the program, and we have already been cooking something with the AI and, you know,

[01:53:28] - [01:53:38]

Shashwat Outskill: about AI and with the AI. So, we have something very special, today to showcase in front of you. I just need 10 to 15 minutes of yours.

[01:53:38] - [01:53:42]

Shashwat Outskill: to, you know, discuss about this. So, can we start, folks?

[01:53:43] - [01:53:45]

Shashwat Outskill: Give me a yes in the chat.

[01:53:49] - [01:53:51]

Shashwat Outskill: Yes, nice, I like the energy.

[01:53:52] - [01:53:54]

Shashwat Outskill: Okay, so I'll just share my screen.

[01:53:54] - [01:53:55]

Shashwat Outskill: Just a second.

[01:54:02] - [01:54:04]

Shashwat Outskill: So, folks, can you see my screen?

[01:54:07] - [01:54:09]

Shashwat Outskill: Is it visible?

[01:54:11] - [01:54:12]

Shashwat Outskill: Perfect, perfect.

[01:54:12] - [01:54:22]

Shashwat Outskill: So, folks, yeah, we have something very special, you know, planned for you, a very special thing, and this is the Outscale Illumini Forge.

[01:54:23] - [01:54:27]

Shashwat Outskill: So, what is this watch? Anything in your mind? Anything is coming to your mind, just tell me.

[01:54:28] - [01:54:29]

Shashwat Outskill: Tell me in the chat.

[01:54:37] - [01:54:39]

Shashwat Outskill: Yeah, something for the alumni, right?

[01:54:40] - [01:54:49]

Shashwat Outskill: Illumini Meet up... collaboration, team-making, networking, yeah, yeah. So, this is a, you know, mix of everything.

[01:54:49] - [01:54:59]

Shashwat Outskill: Not just a meetup, not just a collaboration, it is a mixer of collaboration, meetup, networking, product, showcases, and many more things we have planned up for you.

[01:54:59] - [01:55:11]

Shashwat Outskill: Because, you know, we just not limit you, to, till when the course ends. We just, we want with you to continue after you're building something and, you know, want to showcase to the world.

[01:55:11] - [01:55:14]

Shashwat Outskill: So, starting with the forge.

[01:55:14] - [01:55:25]

Shashwat Outskill: So, basically, before we deep dive in this, let's do a quick pulse check, and keep your keyboards ready for this. So, you can see 3 questions on your screen.

[01:55:25] - [01:55:41]

Shashwat Outskill: First is, how many of you got stuck on a bug or a prompt lately, and you know, just gave up out of frustration that, no, it's not being done, and I'm done with it? Or how many of you finally shipped a very cool script, or a mini project, or a product, or a full-scale product.

[01:55:41] - [01:55:52]

Shashwat Outskill: or a service, but now, you know, felt like that, you know, nobody who actually saw it, who understands the AI space, but who has seen and, haven't seen it.

[01:55:52] - [01:55:59]

Shashwat Outskill: So... and the third is that how many of you have highly specific AI questions, but you don't know where to ask it?

[01:55:59] - [01:56:00]

Shashwat Outskill: Okay?

[01:56:01] - [01:56:04]

Shashwat Outskill: 1 and 3, 1, 2, 3, Gurmi.

[01:56:04] - [01:56:08]

Shashwat Outskill: 3... nice, nice. So, I guess everyone is somewhere.

[01:56:08] - [01:56:11]

Shashwat Outskill: Right? Somewhere is somewhere. Yeah.

[01:56:11] - [01:56:12]

Shashwat Outskill: So...

[01:56:13] - [01:56:19]

Shashwat Outskill: There's a truth that nobody tells you. It's a hard truth, and nobody tells you. And today, I'm gonna tell you that truth.

[01:56:20] - [01:56:22]

Shashwat Outskill: So that is, if you get stuck.

[01:56:22] - [01:56:32]

Shashwat Outskill: And you doubt the idea of yours, or you wonder that you're the only one confused, or I'm the only one confused, but no. The good news is that we are not.

[01:56:32] - [01:56:49]

Shashwat Outskill: every builder in this session, in this room, in this whole community has been there once. Have you ever been stuck on an idea, then you discussed it with someone, and, you know, discussed it, and got some, like, oh, this can be the way, and we can do, like, this also?

[01:56:50] - [01:56:53]

Shashwat Outskill: Come on, give me a yes in the chat, if you have been there.

[01:56:55] - [01:56:56]

Shashwat Outskill: Nice.

[01:56:59] - [01:57:04]

Shashwat Outskill: So, right now, you are just not a learner anymore, okay?

[01:57:04] - [01:57:11]

Shashwat Outskill: So, what you got util here, was a guided and a linear path following a cohort

[01:57:11] - [01:57:31]

Shashwat Outskill: a curriculum, a guided learning, where there were mentors, co-mentors, who were, you know, helping you out with the AI courses and everything. But where you go next is entirely a different scenario, different thing, and it's just not moving from a learner to a builder. It's about peers, real-world projects.

[01:57:31] - [01:57:35]

Shashwat Outskill: And, solving problems and unlocking opportunities through networking.

[01:57:37] - [01:57:38]

Shashwat Outskill: Are you getting my point, folks?

[01:57:42] - [01:57:43]

Shashwat Outskill: Yeah.

[01:57:43] - [01:57:44]

Shashwat Outskill: Very nice.

[01:57:45] - [01:57:53]

Shashwat Outskill: So, this is why the Illumini Forge is here. So, you have, you know, questions like, what is the forge, and what it does exactly do.

[01:57:53] - [01:58:03]

Shashwat Outskill: Okay, so I'm there to solve that question that it is a space built by the community, that is you, and led by the community, that is you.

[01:58:03] - [01:58:17]

Shashwat Outskill: And the best part of it is, it is free. No extra cost, nothing. It is a place where the people who got through the cohort hang out, ship together, make product, discuss products, and pull each other up.

[01:58:18] - [01:58:19]

Shashwat Outskill: So, are you guys interested?

[01:58:21] - [01:58:24]

Shashwat Outskill: Come on, give me a yes in the chat, or a boom in the chat.

[01:58:29] - [01:58:31]

Shashwat Outskill: Nice, I like the energetic foods.

[01:58:31] - [01:58:35]

Shashwat Outskill: So, what do you exa- like, what do you actually need?

[01:58:35] - [01:58:43]

Shashwat Outskill: We didn't just guess that what he wanted, we mapped out exactly what the alumnis have been asking for. Okay.

[01:58:43] - [01:58:47]

Shashwat Outskill: So, you said you need help when you were stuck.

[01:58:47] - [01:58:55]

Shashwat Outskill: You wanted a place to show what you shape, what you made, and you just wanted people to talk about your build and ideas.

[01:58:56] - [01:59:13]

Shashwat Outskill: You needed AI updates that actually matter, and you wanted to connect with, you know, gigs and co-founders, and find jobs in the AI space, or just, you know, collaborate with the founders and network, all along, in the community, with all over the world, across various domains.

[01:59:14] - [01:59:15]

Shashwat Outskill: Right.

[01:59:15] - [01:59:22]

Shashwat Outskill: So, for all these, 5 needs which we figured out, we figured out some 5 spaces. That is the peer support.

[01:59:22] - [01:59:37]

Shashwat Outskill: For the second part, and a place where you want to show something, what you build and working on, is the wins and showcases. And people to talk about building is the general chat, and AI updates, whatever happening in the whole AI world.

[01:59:37] - [01:59:46]

Shashwat Outskill: is the AI Pulse, and gigs, jobs, and co-founders, where you can actually network with people and your peers, is the Opportunity Hub. So, are you guys interested?

[01:59:46] - [01:59:47]

Shashwat Outskill: Should we move ahead?

[01:59:51] - [01:59:52]

Shashwat Outskill: Yes, nice.

[01:59:54] - [02:00:01]

Shashwat Outskill: So, let's take a look at the everyday spaces. So, everyday spaces consist of the general chat and the AI pulse.

[02:00:02] - [02:00:20]

Shashwat Outskill: So, right now, I was talking about the general chat. It is a, you know, a virtual water cooler kind of thing, where you can just drop a random thought, share any weird tool you found out on the internet, or ask any stupid AI-related question, or you want to roast the launch of an AI...

[02:00:20] - [02:00:37]

Shashwat Outskill: you want to do something with that, you can just post there, and you know, you can just discuss out with your peers, and you guys can chat and chat around that, and you can also discuss about what the thing is that. And honestly, some of the best, co-founder pairings just start with a random message.

[02:00:38] - [02:00:55]

Shashwat Outskill: And, then the AI Pulse. So, AI Pulse is a news filter. Found any news on the, new model, drop on the AI Pulse channel. Any API change or anything, drop on the AI Pulse channel. Or, with any AI news which is revolving around,

[02:00:55] - [02:01:09]

Shashwat Outskill: world can be shared here. Okay, so you have anything regarding AI, any news regarding AI, you can share on the AI Pulse, channel. It is a kind of an info sharing about the news of the AI, whatever happening around in the AI world.

[02:01:10] - [02:01:12]

Shashwat Outskill: So, should we move ahead, folks?

[02:01:16] - [02:01:17]

Shashwat Outskill: Nice.

[02:01:18] - [02:01:23]

Shashwat Outskill: So, then we have, another space, that, that is the peer support.

[02:01:24] - [02:01:28]

Shashwat Outskill: So, peer support is basically your whole out-skill community peers.

[02:01:28] - [02:01:46]

Shashwat Outskill: they will be, present on the space of all... across all programs, the AIAP, AI Generalist, Catalyst, and all various programs code will be present there in the peer support. If you're stuck on any bug, or any blocker is stopping your build, or any idea if you're working on, just drop a screenshot on the peer support.

[02:01:46] - [02:01:59]

Shashwat Outskill: And chances are that someone else in the cohort, or already a mentor who has already fixed that exact error, or who is also stuck on that error, can sit around together, and, you know, you guys can solve it together.

[02:02:00] - [02:02:13]

Shashwat Outskill: or the, you know, whole community will help together with the bloggers. So, it is a kind of a peer support, peer-to-peer support. So, for the next time, whenever you're stuck on any idea, just go to peer support and post there.

[02:02:17] - [02:02:29]

Shashwat Outskill: So, the next is the... this is my personally favorite space, the VINs and showcases, and I call this as the hype room. So, why the hype room? So, this is where shipping becomes a habit.

[02:02:29] - [02:02:47]

Shashwat Outskill: And where every milestone gets celebrated. So, just don't wait for it to be perfect, whether I launched a full MVP, or just started working on a new idea on a Sunday afternoon, just laying on the bed and thinking, oh, I should work on this idea, and you know, this sounds so amazing, I should white-code this or something.

[02:02:47] - [02:02:49]

Shashwat Outskill: Take that idea out.

[02:02:49] - [02:03:08]

Shashwat Outskill: go on the VINs and Showcases space, and post it there. The community loves to celebrate the wins, and we love to celebrate your wins together, even if it's a small or a big win. We are here to celebrate with you. And plus, when you share your win, you inspire the person who is still afraid to start.

[02:03:08] - [02:03:24]

Shashwat Outskill: and you're proving that it is doable. So, you know, that is the loop that, keeps this forge moving. So, are you guys gonna do that and, you know, keep the forge moving and help your peers and show your wins and showcases and everything? Give me a boom in the chat. Come on.

[02:03:28] - [02:03:30]

Shashwat Outskill: Nice, nice.

[02:03:32] - [02:03:36]

Shashwat Outskill: And finally, we have our final space, that is the Opportunity Hub.

[02:03:36] - [02:03:45]

Shashwat Outskill: So, whenever, you have a, you know, company running out, you're a co-founder, you're a gig, or you want a freelancer in the AI

[02:03:45] - [02:03:57]

Shashwat Outskill: space and everything. So, you know, full-time roles, are posted by builders, and it is posted for builders. You can also get freelance, Lancer posts here, and you can

[02:03:57] - [02:04:18]

Shashwat Outskill: also get co-founders who are matching when you're ready to build something serious. Like, let's just take an example. I'm a co- I'm a founder of an AI product, and I want a freelancer to come and who knows the AI space and AI domain, and I want to get a help from him, and I'm not able to find people over LinkedIn, over any job post, or anything.

[02:04:18] - [02:04:19]

Shashwat Outskill: So...

[02:04:19] - [02:04:32]

Shashwat Outskill: I will just go there, post in the Job Opportunity Hub, and people from the whole Outskill community can come and apply on that job, and I can get my, you know, suitable fit for me.

[02:04:32] - [02:04:34]

Shashwat Outskill: So, does it sound exciting, folks?

[02:04:40] - [02:04:41]

Shashwat Outskill: Nice.

[02:04:42] - [02:05:01]

Shashwat Outskill: So, let me help you with a walkthrough of the LMS that, right now, I've been, you know, asking about, telling you about these spaces that, we have opportunity via AI Pulse and everything, but where can you find these spaces? So, you just have to go to your, LMS. Is my screen visible to you?

[02:05:01] - [02:05:04]

Shashwat Outskill: Just give me a yes in the chat. Can you see the LMS?

[02:05:06] - [02:05:16]

Shashwat Outskill: Yeah, perfect. So, you will find a space here, the outscale Illuminae Forge, and here, you can find, find these spaces we were talking about right now.

[02:05:16] - [02:05:37]

Shashwat Outskill: So, these are the spaces that, I've been talking about with you. The first one is the announcement space. So, this space is admin-controlled, the community controlled, and every, you know, announcement, anything regarding the session, the offline meetups under the networking session, anything regarding to the Forge will be posted here, and it will, keep you updated.

[02:05:37] - [02:05:49]

Shashwat Outskill: Okay, so the next space is the general chat, what I've been talking about. Here you can come and, you know, just chat about the things we were talking about.

[02:05:49] - [02:05:57]

Shashwat Outskill: And then next is the peer support. I can see your questions, folks. I'm... when I'm just done with this LMS part, I'll address them. Just, wait for 2 minutes.

[02:05:57] - [02:06:00]

Shashwat Outskill: Yeah. So,

[02:06:00] - [02:06:21]

Shashwat Outskill: Coming for the peer support, this is the peer support space I've been telling you about. Just come here, post your screenshots, and get the support from the peers and help each other out here. Then the next is the AI Pulse space I've been talking about. This is where you can, you know, share the trending AI news and everything.

[02:06:21] - [02:06:29]

Shashwat Outskill: And the next space I was talking about is the wins and showcases. Here, you can just come and post your wins and showcases.

[02:06:29] - [02:06:49]

Shashwat Outskill: And, there is also a link attached, in the pin here. So, here you can see the ready to demo your product live. So, this is a Google Form link, where you can submit your product over the Google Form, and the team will go through it, and we will reach out to you regarding your product if we like it and we want to discuss about it more.

[02:06:50] - [02:06:53]

Shashwat Outskill: And the next space is the Opportunity Hub.

[02:06:53] - [02:07:03]

Shashwat Outskill: So, the Opportunity Hub, I was talking about that. Here, you can come and, you know, post about your hiring or freelancing or anything. You can just come here and discuss about that.

[02:07:04] - [02:07:14]

Shashwat Outskill: So, yeah, some people were asking that I don't see this page on my platform. So, folks, these, spaces will be available from, tomorrow.

[02:07:14] - [02:07:26]

Shashwat Outskill: So, please wait till midnight. After that, these spaces will be available to you, and you can come and start, you know, interacting with each other and start the forge moving. So, am I clear to you right now?

[02:07:30] - [02:07:31]

Shashwat Outskill: Give me a S in the chat, folks.

[02:07:35] - [02:07:36]

Shashwat Outskill: Perfect, perfect.

[02:07:37] - [02:07:38]

Shashwat Outskill: Nice.

[02:07:38] - [02:07:47]

Shashwat Outskill: So, we have a very big surprise for you, a kind of an announcement, and it is a very amazing surprise I want to discuss with you. So, are you ready?

[02:07:52] - [02:07:56]

Shashwat Outskill: Okay, I see a lot of yes, so let's go, yeah, let's go.

[02:07:57] - [02:08:07]

Shashwat Outskill: So, our very first product, live product showcase event, which is coming up this Friday, that is 15th May 2026, at 7.30pm IST,

[02:08:07] - [02:08:26]

Shashwat Outskill: Okay, so this is a live product showcase where we have, you know, selected two community products, and we will be showcasing these products and do a live teardown of these products, and how it has been built, and, how the... all the things have been done, and it is all built by our, you know, alumni of the outscale.

[02:08:26] - [02:08:30]

Shashwat Outskill: And how they are scaling these products in the industry.

[02:08:30] - [02:08:35]

Shashwat Outskill: And, you know, how they're making this business scalable. So, they will come, showcase their product.

[02:08:35] - [02:08:42]

Shashwat Outskill: And interact with you guys, and you guys can network together for the live product showcase.

[02:08:42] - [02:08:52]

Shashwat Outskill: And if you want a slot in the next, showcase, I have shown you the space where you can find a Google Form. Just go there and fill when the space will be available to you on the LMS.

[02:08:52] - [02:08:54]

Shashwat Outskill: Okay, any, any questions right now?

[02:08:59] - [02:09:02]

Shashwat Outskill: Perfect, perfect. So, are we clear to you now, folks?

[02:09:05] - [02:09:06]

Shashwat Outskill: So, before we wrap.

[02:09:07] - [02:09:13]

Shashwat Outskill: what is your very first move to be when the LMS space will be clear to you, visible to you?

[02:09:13] - [02:09:22]

Shashwat Outskill: So, whatever it is, log in, drop one sentence in the general chat about who you are and what you're building, and

[02:09:22] - [02:09:38]

Shashwat Outskill: You know, just, chat about, go to the peer support, and ask for any broken, workflows or anything, or share something you shipped, or even if it half... it is half broken, or fully scalable anything, and network with your peers in the forge.

[02:09:38] - [02:09:49]

Shashwat Outskill: So, that was all, my part, folks, and I will see you soon, again, in the fourth session, and keep building. Happy building. So, from here on, Karthik, you can take up the call.

[02:09:50] - [02:09:59]

Kartik_Outskill: Amazing, amazing, amazing. Folks, how did you like it? Did you like what we have got you?

[02:09:59] - [02:10:09]

Kartik_Outskill: Have you liked it? Give me Forge in the chat. Give me Forge in the chat if you loved what we are trying to bring in, and...

[02:10:09] - [02:10:14]

Kartik_Outskill: I want the chat to be booming like anything. Amazing, amazing, amazing.

[02:10:15] - [02:10:16]

Kartik_Outskill: Great.

[02:10:18] - [02:10:21]

Shashwat Outskill: Let's go. People are really excited, I guess.

[02:10:21] - [02:10:26]

Kartik_Outskill: Yes, yes, yes. Folks, so, don't worry.

[02:10:26] - [02:10:43]

Kartik_Outskill: We will be sharing all the details about the LMS. LMS will be available to all of your circle, your platform.outskill.com space by tomorrow. So you need not to worry about that. It will be live tomorrow.

[02:10:44] - [02:10:58]

Kartik_Outskill: Then, on Friday, we are going to come up with our first live showcase, which, which is about the product showcase. As we said, we are going to bring in two people.

[02:10:58] - [02:11:01]

Kartik_Outskill: Two folks from,

[02:11:01] - [02:11:16]

Kartik_Outskill: Like, they are from the community, they are people who were just like you few months back, who came in, who learned with us in the cohorts, and now building something amazing.

[02:11:16] - [02:11:30]

Kartik_Outskill: And they will be coming in, showcasing what they have built, and how they have built, what all have gone into building those products, and you are going to be mesmerized on Friday.

[02:11:30] - [02:11:31]

Kartik_Outskill: So...

[02:11:32] - [02:11:46]

Kartik_Outskill: For this, for the community, we are trying to bring in as many things as possible, but there are few things. There are few things that we need to make sure we do not miss out on.

[02:11:46] - [02:11:54]

Kartik_Outskill: There are a few very important guidelines that I want to talk about regarding this Illumini forge.

[02:11:54] - [02:11:59]

Kartik_Outskill: Whenever... There are few guidelines, again, as

[02:12:00] - [02:12:06]

Kartik_Outskill: We would want you to show up as a builder each and every time, and not just as a spectator.

[02:12:06] - [02:12:07]

Kartik_Outskill: Right?

[02:12:07] - [02:12:17]

Kartik_Outskill: Again, lurking is fine for a week, but after that, contribution is very, very important, and it is a responsibility of each one of us.

[02:12:18] - [02:12:24]

Kartik_Outskill: Second, We do not want you to sell or spam anything for... to anybody.

[02:12:24] - [02:12:43]

Kartik_Outskill: Right? You want to pitch something, you want to offer an opportunity, you want to get opportunities, we have created a dedicated space called Opportunity Hub. Go there and put it out there. Don't slide into DMs, or don't do any such thing. Be respectful.

[02:12:44] - [02:13:03]

Kartik_Outskill: Search before you ask. Again, we have been mentioning about this thing, we have been mentioning about this thing, in the sense of ask the mentor and all of these things, but now, since you are asking your peers, always understand, we are a community of more than 10,000 people right now.

[02:13:03] - [02:13:10]

Kartik_Outskill: Out of the 10,000, always check if there is anybody who has already asked this question.

[02:13:11] - [02:13:20]

Kartik_Outskill: Because there will always be people who have asked this question, and the solution might just be out there in the community space itself.

[02:13:21] - [02:13:31]

Kartik_Outskill: Fourth, credit people always, we will be opening these spaces by tomorrow. You will be starting... you will start putting in, things in these spaces. We...

[02:13:32] - [02:13:52]

Kartik_Outskill: Let's say if somebody supported you, if I supported Shashworth, I would... I would want and feel happy if I get that credit, so please make sure you are always giving the credit publicly, because that is how your reputation, your rapport is gonna be built in this forge.

[02:13:53] - [02:13:54]

Kartik_Outskill: No.

[02:13:54] - [02:14:08]

Kartik_Outskill: Very important thing. What's set in forge stays in the forge. Members share work in progress, revenue numbers, struggles, treat it like a trusted room. We do not want things to get out of this room.

[02:14:08] - [02:14:12]

Kartik_Outskill: Are we all clear till now? Can I have clear in the chat?

[02:14:12] - [02:14:14]

Kartik_Outskill: Can I have clear in the chat?

[02:14:18] - [02:14:20]

Kartik_Outskill: Amazing!

[02:14:20] - [02:14:24]

Kartik_Outskill: Few more guideline points, I will just wrap it up very, very soon.

[02:14:25] - [02:14:35]

Kartik_Outskill: Again, sixth point, keep it to LMS, no WhatsApp. You all know it, we don't entertain any unofficial WhatsApp groups. Please do not create them.

[02:14:36] - [02:14:41]

Kartik_Outskill: Seventh, very important point, that is respect, respect, respect.

[02:14:41] - [02:14:58]

Kartik_Outskill: Make sure, be respectful to everybody, respect... be respectful to your peers, be respectful to your mentors, be respectful to the people who are coming in and showing their events, trying to learn more and more, trying to get opportunities.

[02:14:58] - [02:15:02]

Kartik_Outskill: Make sure you are not being disrespectful to anybody.

[02:15:02] - [02:15:24]

Kartik_Outskill: 8 sessions are goldmine, missing one is your loss, okay? We are going to bring in weekly AI updates, we are going to bring in AI sprints, and now you are already seeing the very first thing that we are bringing in for the Alumni Forge is the product showcase. All of these things are there to help you learn.

[02:15:25] - [02:15:35]

Kartik_Outskill: Okay, so make sure not to miss out this... these sessions, attending live, so that you are on top of everybody else.

[02:15:36] - [02:15:55]

Kartik_Outskill: Ninth and very important, your email IDs are our identifiers. Don't use multiple email IDs to join live sessions, or to join LMS, or for any other thing. Try to stick to one email ID, if not maximum two. That is what is most important. And at the end.

[02:15:56] - [02:16:08]

Kartik_Outskill: I want to say, let's collaborate and build something messy together. If you are all in with me, give me build in the chat. Give me build in the chat, so that

[02:16:08] - [02:16:23]

Kartik_Outskill: We get to know, and we are all excited to bring you all, tomorrow, the AI Sprint Day 2, and on Friday, the product showcase, the very first product showcase out of Alumni Forge.

[02:16:26] - [02:16:29]

Kartik_Outskill: Amazing! Build, build, build, great!

[02:16:33] - [02:16:37]

Kartik_Outskill: Amazing, amazing, amazing! Great, great, great!

[02:16:37] - [02:16:46]

Kartik_Outskill: Cool. So, on this note, folks, that is it from our side for today. I hope to see you all tomorrow. Make

[02:16:46] - [02:17:01]

Kartik_Outskill: Other people also know that we are coming with these AI sprints and AI masterclasses on a very regular basis. Can we say it is going to be, it is going to be every week, every 15 days, once in a month? No.

[02:17:02] - [02:17:07]

Kartik_Outskill: Why? Because we also try and bring more and more things like that.

[02:17:07] - [02:17:25]

Kartik_Outskill: But we are making sure that we are going to come in again and again, if not every week, every 15 days, every 3 weeks, every 2 weeks, every month, at least once. We are committed to that. We are going to come back and start and keep on delivering the value

[02:17:25] - [02:17:41]

Kartik_Outskill: So, please make sure not to miss out. Yes, the recordings will be available for this session. You will get it by tomorrow morning, Indian Standard Time. The same practice that we generally do. Before 11AM, you will get the recordings, as well as you will get the,

[02:17:42] - [02:17:51]

Kartik_Outskill: you will get the post-read material as well, so need not to worry about that. Also, please inform other peers as well, if you know if you are having any excess

[02:17:51] - [02:18:07]

Kartik_Outskill: to connect with people, that those who are attending live are gonna get certificates as well for AI Sprint on Windsurf and Devon. We will be putting it out right after tomorrow's session. No.

[02:18:07] - [02:18:12]

Kartik_Outskill: Day after tomorrow, once the session is done, we will be doing it,

[02:18:12] - [02:18:14]

Kartik_Outskill: We will be doing it.

[02:18:14] - [02:18:25]

Kartik_Outskill: Shams are saying we need more sessions, sessions more frequently to be updated. Shams, again, it is not something that we try to delay. The Zoom takes time.

[02:18:25] - [02:18:36]

Kartik_Outskill: to give us the recording. It processes the recording and give us... it takes good 4-5 hours. The ones we get the recording, in the morning, first thing when we start, we upload the recording.

[02:18:37] - [02:18:50]

Kartik_Outskill: On this note, thanks a lot, folks, thank you for joining in. I will be, seeing you all tomorrow. Please make sure not to miss out. Bye-bye, have a great day, enjoy, and I will see you tomorrow.
