

Bonus Session 2: Windsurf + Devin

11:14 - 11:20

Kartik_Outskill: All right! Hello, hello, hello, hello, everybody! Good evening, good morning, good afternoon.

11:20 - 11:22

Kartik_Outskill: How are you all doing?

11:29 - 11:34

Kartik_Outskill: Awesome, great, excited, great, great, great.

11:37 - 11:38

Kartik_Outskill: Amazing!

11:43 - 11:45

Kartik_Outskill: Thank you, Chirak, thanks a lot.

11:48 - 12:00

Kartik_Outskill: Amazing, amazing, amazing. Cool. Folks, I hope, I hope I am clearly visible and audible, before we go ahead into, into learning today.

12:01 - 12:10

Kartik_Outskill: Firstly, again, welcome you all to AI Sprints and Masterclass, an attempt from our side, from Outskill.

12:10 - 12:21

Kartik_Outskill: to bring in as much value as possible, to all of you. So, that is where we are coming in. And, since we had our day one.

12:22 - 12:22

Kartik_Outskill: of...

12:23 - 12:35

Kartik_Outskill: just going into, from the very beginner level to, to a bit intermediate level, we started with our day one of Windsorf and Devon.

12:36 - 12:37

Kartik_Outskill: Sprint.

12:37 - 12:38

Kartik_Outskill: I hope...

12:39 - 12:50

Kartik_Outskill: Most of you were there, I hope that, and if you have not been, don't worry, we will have a small recap around that, so that you do not miss out on that, but...

12:50 - 12:55

Kartik_Outskill: If you were there and joining in today, are you excited?

12:55 - 12:56

Kartik_Outskill: to go.

12:56 - 13:06

Kartik_Outskill: from intermediate to advanced level in Winsuff and Devon. Give me excited in the chat so that we can go ahead and start with today's session.

13:10 - 13:12

Kartik_Outskill: Super excited, amazing, amazing, amazing.

13:17 - 13:18

Kartik_Outskill: Great!

13:19 - 13:32

Kartik_Outskill: Great, great, great, great, great. Amazing. Cool. So, folks, again, as I said, we are here for Wins of End event. We are going from intermediate to advanced today. Make sure, to,

13:33 - 13:37

Kartik_Outskill: To keep the writing pads and pens ready with all of you.

13:37 - 14:00

Kartik_Outskill: Keep the notes, take the notes. If you are having any question, we will... we will ask... we'll let you ask them, but we will... we might not be able to take all the questions, but

the... but the most relevant questions will surely be taken, so need not to worry about that. Try not to do it alone. Again, you all know the drill. If you are gonna try that, there is a very high chance that you might miss out on the

14:00 - 14:04

Kartik_Outskill: Important nuances around the session, around the topic.

14:04 - 14:08

Kartik_Outskill: And, on this note, Let me call in.

14:08 - 14:10

Kartik_Outskill: Your favorite mentor.

14:10 - 14:19

Kartik_Outskill: The person you all have been learning from for quite a long period of time, none other than Dilip?

14:20 - 14:22

Kartik_Outskill: Yes, yes, yes, we have the lip.

14:29 - 14:30

Kartik_Outskill: Amazing.

14:32 - 14:46

Kartik_Outskill: Amazing, amazing, amazing. Yes, analogies expert, and yesterday we were just discussing the recipes. Today, we are going into cooking it. On this note, I will be calling in Dilip. Hello, Dileb, good evening, how are you?

14:49 - 14:52

Dileep Karri: Hi, everyone, and a very good evening to all of you.

14:54 - 15:11

Kartik_Outskill: Good evening, Dilip. Folks, give us Boom in the chat so that we can directly dive into the session. Give us Boom in the chat so that we can directly dive in. And Dilip, I think the learners are pretty excited, they are all energized. I think we can take it over from here. Over to you.

15:11 - 15:14

Dileep Karri: Got it, got it. Awesome, awesome.

15:14 - 15:17

Dileep Karri: Thank you, folks, thank you folks for the warm welcome, and

15:18 - 15:35

Dileep Karri: just a little disclaimer, I'm kind of on the verge of a headache, so I will try to keep going as much as I can, but in case if it becomes too much and I'm not able to function, I will tell you, and I will, you know, let you know if that is the...

15:36 - 15:37

Dileep Karri: Case overall.

15:38 - 15:44

Dileep Karri: So you'll bear with me, my energy will be a little bit better, a little bit lower than usual, but I'll try to keep,

15:45 - 15:51

Dileep Karri: You know, going ahead with this. So let me do a quick recap of the session.

15:52 - 15:56

Dileep Karri: Yesterday, and we will take it forward.

16:10 - 16:13

Dileep Karri: Alright, so what did we do yesterday?

16:13 - 16:36

Dileep Karri: So yesterday's session was more like the foundation for what we are planning to do today. So what we did was, we were actually talking about the difference between wipe coding and agent decoding, wherein we were looking at vibe coding as a conversation that happens on bold, lovable, or emergent, whereas agent decoding

16:36 - 16:47

Dileep Karri: is something that, you know, viewer, something like a specification or a direction, overall. In vibe coding, it is AI...

16:47 - 17:11

Dileep Karri: building the requirement, whereas in agent decoding, it is the agents are building, and you are providing the direction. And then we talked about three things, mainly GitHub, specification, what do you mean by good specs, what are the things you need to take care, and then we talked about... a little bit about Windsurf and Devon before we closed. Today, we will go further into Windsurf and Devon.

17:11 - 17:16

Dileep Karri: And then actually get into how we can, you know, understand,

17:16 - 17:34

Dileep Karri: overall, you know, how we can build this application. So, we are attempting to build SuperPlexity, which is like a... maybe a advanced, or maybe a customized, or maybe an elevated version of Perplexity, so that is what we are trying to do.

17:35 - 17:42

Dileep Karri: And so the main example that we had understood, with GitHub is on...

17:42 - 18:01

Dileep Karri: you know, a pizza restaurant. We looked at how a chef who is working on the recipe book and wants to share with the sous chef the copies of the recipe, what are the problems and challenges they would face, and we talked about different things like branch, commit.

18:01 - 18:06

Dileep Karri: pull request and merge. So we looked at all of the GitHub terminology.

18:06 - 18:30

Dileep Karri: Then we talked, after the GitHub terminology, we went into, you know, understanding the difference between what is a specification and a conversation. A specification is like a MasterChef recipe, whereas a conversation is like a grandmast recipe. So how do you do that? So then we talked about what are the different specifications you need to think can provide. Edge cases, how can the

18:30 - 18:31

Dileep Karri: go wrong.

18:32 - 18:44

Dileep Karri: Then we talked about authentication and authorization, how to provide the authentication and authorization. Then we also talked about, you know, rate limits being a problem where you were hit.

18:48 - 19:05

Dileep Karri: You might hit a particular rate limit in Cloud or at different points of time. Then we have error handling, where you have error 1, error 2, error 3, and you could have, you know, how should the application respond in the means of an error?

19:05 - 19:13

Dileep Karri: Right? So these were the few things that we discussed, and then we talked about the journey of Windsurf. Windsurf was, a...

19:13 - 19:23

Dileep Karri: you know, kind of a branch of VS Code itself. Cursor is another branch or fork of VS Code, to be very clear. Then,

19:23 - 19:47

Dileep Karri: Windsurf, the main founding team, were acquired by Google, who built anti-gravity on top of old Windsurf. Then the remaining Windsurf got acquired by Cognition, which is Devon, and that turned out to be Windsurf 2.0 and Devon overall. So we will talk about, a little bit about Devon and Windsurf 2.0, but in a way, if I have to differentiate between

19:47 - 19:53

Dileep Karri: between wind surf, And Devon.

19:53 - 20:03

Dileep Karri: Okay, if I have to try to differentiate between Winsurf and Devin, this is the difference. Winsurf is an AI IDE,

20:04 - 20:07

Dileep Karri: Okay, but Devin is an autonomous coding agent.

20:14 - 20:21

Dileep Karri: Okay, Windsurf is an AI IDE, while Devin is an autonomous coding agent. So, in Winsurf.

20:22 - 20:33

Dileep Karri: you are... so IDE means Integrated Development Environment, where you can write code. So in VintSurf, mainly, what you try to do is...

20:36 - 20:49

Dileep Karri: You try to, set up the code base... You know, collaborate and... Write the code.

20:52 - 21:05

Dileep Karri: etc. And, typically, right, Devon is, something like, okay, fix the bug, Implement the feature.

21:10 - 21:28

Dileep Karri: Etc. One key difference between Devon and Windsurf is Windsurf is local, so all the code that you build is on your local folder, whereas Devon, in the other hand, it happens in the cloud with its own sandbox.

21:29 - 21:31

Dileep Karri: How many of you know the term sandbox?

21:34 - 21:50

Dileep Karri: How many of you know the term sandbox? Anybody who does not know the term sandbox? Okay, a quick understanding of sandbox. Let us go back to the restaurant, okay? And suppose the sous chef has an idea for a wild dish.

21:50 - 22:09

Dileep Karri: and made the changes of the recipe. You want to test if the recipe is good, the cooking is good or not, and for that recipe or cooking, instead of testing it in the main kitchen, what the, you know, the chef will do is, he will say, here is a testing kitchen.

22:09 - 22:15

Dileep Karri: Make the dish there, and after you make the dish in the testing kitchen, that is what?

22:15 - 22:38

Dileep Karri: you can taste it and say, okay, it is good, then I'll get it into the main kitchen. So something like a protected environment, especially, if I'm doing a crazy science experiment, I would like to do it in a sandbox and not somewhere outside. So that is what is a sandbox, a protected environment to do some testing without affecting anything else. So that is, this thing.

22:38 - 22:44

Dileep Karri: Now, in a way, right, if I look at any kind of...

22:44 - 22:49

Dileep Karri: combination, right? For example, one of the combinations is cursor plus Claude.

22:50 - 23:01

Dileep Karri: Okay, so cursor plus Cloud Code combination, that cursor plus cloud code combination is exact like wind surf plus Divin, where cursor is the IDE,

23:02 - 23:06

Dileep Karri: Claude Code is the autonomous agent.

23:07 - 23:17

Dileep Karri: Okay, like that, there are multiple ways to do that. In fact, you can add Claude code in Windsorf also. So, I can use Windsurf.

23:18 - 23:19

Dileep Karri: Bless?

23:20 - 23:31

Dileep Karri: Cloud Code, okay? Because everything is Visual Studio Code VS Code, and VS Code has an official Cloud Code extension, so you can use it.

23:34 - 23:39

Dileep Karri: Okay, any IDE you think of, there is an overlap of at least

23:39 - 24:03

Dileep Karri: 70% to 80% features, I can combine anything in any way I want. It is up to me. I have to think about what I combine, how I combine, and how do I use it. In this session, I'm going to use Windsurf and Devon. Again, you might have some questions on how does it compare to other tools, etc. For each their own, you have to test it out yourself.

24:07 - 24:11

Dileep Karri: And figure it out. But what I felt is Devon is very powerful.

24:11 - 24:25

Dileep Karri: Devon, is quite powerful, and, it can, do a lot of things, and that is one of the reasons is because Devon, right, they have...

24:26 - 24:31

Dileep Karri: You know, they have kind of focused purely on software.

24:32 - 24:38

Dileep Karri: So Devon's focus is purely on software, so Devon is not optimized for the non-coding tasks.

24:42 - 24:49

Dileep Karri: Okay? But, in a way, cloud code, right? Cloud code is optimized a little bit for the non-porting tasks.

24:49 - 25:03

Dileep Karri: But Devon is completely done with respect to software, okay? So Devon is completely done with respect to software, etc. You should check out the founder of Devon, called Scott Wu.

25:03 - 25:06

Dileep Karri: Okay? He is a prodigy, he's a genius.

25:07 - 25:26

Dileep Karri: Right? See, JetBrains and all other IDEs kind of fall into the same bucket, right? So, with the JetBrains IDE also, I can plug in Cloud Code and become an agentic clodding. I can plug in Devon into JetBrains or any other platform that I want. Again, Devon is pretty good in software.

25:27 - 25:32

Dileep Karri: And, and it does a pretty good work overall.

25:32 - 25:38

Dileep Karri: So, what I'm going to do in today's session, so if I look at Devon, right, it will look something like this.

25:38 - 25:48

Dileep Karri: Okay, so this is my Devon setup. Once you sign up on Devon, you will get into this kind of a setup, right?

25:49 - 25:58

Dileep Karri: So, if you're looking at a Devon and wind surf, anything I'm building software, it is very good, but if I'm trying to

25:59 - 26:10

Dileep Karri: do some other tasks, it is not that great. And because this is, something that is only focused on software, it is like an enterprise pricing. It's pricing...

26:10 - 26:13

Dileep Karri: Is a little bit off the curve.

26:13 - 26:21

Dileep Karri: So what I'm going to do is, I am going to use Devon for my existing code to do something, and I'll use WindSurf to build

26:22 - 26:26

Dileep Karri: My new application, and we'll do all of it in tandem.

26:27 - 26:33

Dileep Karri: Okay, so for that, I will share my complete desktop itself, so that it becomes easy to switch.

26:34 - 26:39

Dileep Karri: Okay? So this is my wind surf, sorry, this is my Devon.

26:39 - 26:42

Dileep Karri: And, I have...

26:46 - 26:47

Dileep Karri: I have windsurf.

26:48 - 27:01

Dileep Karri: So, I have Devin, and I have Windsurf. So, in Windsurf, I have, the, you know, side ID, like, agent over here, so I can talk with my agent as to what is happening.

27:01 - 27:11

Dileep Karri: So, I can speak with my agent over here and give it some kind of direction, and then I can move along what it is.

27:12 - 27:25

Dileep Karri: Okay, so basically what I wanted to understand is, I'm going to use Windsorf for building the new application. I'm going to use Devon for an older application to understand, so that it can do it very well.

27:25 - 27:37

Dileep Karri: In the future, I think they're going to merge Devon and Vintsof much closer. That is coming, because both are the same thing. By the way, I was talking about Scott Wu, the founder of Devon.

27:37 - 27:45

Dileep Karri: Okay? So, I want to show something crazy about him. Recently, I came to know about him. So, look at Scott.

27:48 - 27:49

Dileep Karri: He's the...

27:50 - 28:06

Dileep Karri: co-founder of, you know, Devon, right? So he was a competitor programmer who won 3 gold medals at the International Olympiad in Informatics, and came third place in the Google Code Jam.

28:06 - 28:12

Dileep Karri: Right? So he got 3 gold medals. He's, like, he was considered, like, a college, genius.

28:12 - 28:23

Dileep Karri: And he won in the ICPC, which is one of the best coding competitions overall. He won a gold medal and came third place overall.

28:23 - 28:34

Dileep Karri: Okay, so, like, he... if you look at his, right, these are International Olympia 3 Gold Medal winner, ICPC, Harvard, 1 gold,

28:34 - 28:43

Dileep Karri: That he has won, then Top Coder, open algorithm, third place. Code Forces, he's a legendary, grandmaster, means...

28:43 - 28:52

Dileep Karri: So, basically, what I'm trying to drive at is, the founder of Devon is one of the most prolific and best coders possible.

28:52 - 29:00

Dileep Karri: Okay? So he is one of the best coders, coders available in the world out there, and you know.

29:01 - 29:17

Dileep Karri: He's kind of done this, and he has an older brother who is also a graduate from Harvard University with competitive programming techniques, programming achievements, and they have built it. The reason why I'm saying this is.

29:17 - 29:36

Dileep Karri: the software... the person building a company that is on the top in software engineer agent is one of the best coders in the world. So, when he is working with AI and trying to build something, you can be rest assured that the work is going to be top notch.

29:37 - 29:50

Dileep Karri: Okay? You should actually go into the stories of the founders of these companies, it's really crazy. In fact, I... I heard about SCAR2 before, then later on, I very recently realized that the...

29:50 - 29:59

Dileep Karri: Scott Wu, that I know and heard of, was the same person who is the founder of Devil. Little bit later, I came to know.

30:00 - 30:14

Dileep Karri: Okay? So, that's the part of it. So, I'll tell you one thing where Windsurf is better and Devon is better, okay? Devon is extremely good in, something like migrating your code.

30:14 - 30:25

Dileep Karri: Okay, suppose you have a code, written in COBOL, Fortron, some old languages, etc. Devon is really, really good in doing the migration.

30:25 - 30:48

Dileep Karri: Okay? So therefore, Devon has cracked that, and their customers are all focused on migrations, refactoring. I'm using some tech terms, but just think of it like existing code modifications, that is what Devon can do very well. Anything new code you want to build, or, you know, you want to edit it, you want to take it forward, etc. For that, VinSurf is pretty good.

30:49 - 30:53

Dileep Karri: Alright, so now, wind surf...

30:53 - 31:06

Dileep Karri: what we'll do is we will start working on building super complexity right now, and for this thing, I will use my Cloud code also on the side.

31:06 - 31:15

Dileep Karri: Okay, I will use my Cloud code also on the side, just so that I can, you know, show some cool things.

31:15 - 31:39

Dileep Karri: do some brainstorming or planning only on cloud code, and then I will give the plan back to Windsurf to, you know, kind of implement. So I will use, you know, the way... the way I'll do it is, I will use Claude Code for planning, and then WindSurf for executing the plan. That is what we'll do in SuperPlexity. Is it clear, everyone, what I'm going to do? First, I will build the plan

31:39 - 31:41

Dileep Karri: an in-cloud code.

31:41 - 31:42

Dileep Karri: Clear, everyone?

31:44 - 31:49

Dileep Karri: Yeah? Okay. So now what I will do is...

31:57 - 32:16

Dileep Karri: Okay, for those of you wondering how I open Cloud Code in Windsurf, as I told you, there's a fork of VS Code, so I have got extensions. So this is the VS Code extension Cloud Code that I have installed. You can Google about it and understand how you can install Cloud Code inside.

32:16 - 32:24

Dileep Karri: you know, BidSurf or any other platform. So now I have Claude Code, okay? What I'll say is...

32:24 - 32:33

Dileep Karri: I want to make... A plan for building Superplexity.

32:35 - 32:42

Dileep Karri: and elevated... Version... of perplexity.

32:43 - 32:47

Dileep Karri: Okay, I'll... I'll keep ask before edits only.

32:47 - 32:56

Dileep Karri: Okay? An elevated version of perplexity. Ask me... clarifying... Questions?

32:56 - 32:59

Dileep Karri: And jammed with me.

33:00 - 33:03

Dileep Karri: on building... this... plan.

33:04 - 33:07

Dileep Karri: You should take into account

33:12 - 33:14

Dileep Karri: Edge cases...

33:16 - 33:23

Dileep Karri: Authentication, I'll keep it aside. For now, I don't want to worry too much about authentication, so I will say edge cases.

33:23 - 33:25

Dileep Karri: Error handling.

33:27 - 33:47

Dileep Karri: And, what was the other thing? Edge cases, error handling, then, authentication, and rate limits. Okay, rate limits also, is something that I won't face, because I will be using open router, so I will not face rate limits also. So, error handling, and

33:47 - 34:00

Dileep Karri: how to... You know, how to, make... Perplexity, a little... Boom.

34:01 - 34:08

Dileep Karri: better. Okay, very simple question overall. Jamming means discussion, conversation overall.

34:11 - 34:22

Dileep Karri: Okay, so I use these skills called superpowers Brainstorming. So, the brainstorming skill has now, kind of come in with respect to this.

34:31 - 34:32

Dileep Karri: So, there you go.

34:32 - 34:44

Dileep Karri: It is saying, before I start firing questions, please understand that superperplexity, or an elevated version of perplexity, spans a lot of

34:44 - 34:57

Dileep Karri: independent subsystems, query understanding, web retrieval, source ranking, content extraction, LLM synthesis with citations, follow-ups, conversation memory, accounts billing, UI, etc.

34:57 - 35:14

Dileep Karri: Okay? So we won't design all of that in one spec, so therefore the question, one of how many hours it takes, okay? Very nicely. It's going to bombard me with questions. It is going to do, like, an interview with me. Superpowers is a skill. You can Google for superpowers.

35:14 - 35:17

Dileep Karri: Cloud Skill, and you can, install that wherever you want.

35:18 - 35:32

Dileep Karri: Okay? So now, the thing is, what is the primary motivation here? Is it a learning project? Is it a personal power tool? Or is it a productizable prototype, or a specific vertical that you want to do?

35:33 - 35:37

Dileep Karri: Okay, so I'll say B, which is a personal power tool that I want to build.

35:41 - 35:54

Dileep Karri: I want to build a personal power tool overall. So, in my personal power tool, right, I would like to go for something which can search for

35:54 - 35:58

Dileep Karri: Latest information, playbooks, etc.

35:59 - 36:09

Dileep Karri: Okay? So, what question about perplexity falls short for me? So, I will say this. I'll use Whisperflow right now.

36:10 - 36:21

Dileep Karri: mainly, this version of Perplexity should search for any given topic on, it should actually search for, something like,

36:22 - 36:26

Dileep Karri: Substack articles, or Beehive articles, Or...

36:26 - 36:50

Dileep Karri: some very good blogs in that order, so that it can pick up the very good sources. So I... I want, you know, I don't... Perplexity is too broad, it searches for shallow stuff. I want deep, you know, information, very personalized information, etc, which is much better stored in Substack and Beehive, and I also want to get on

36:50 - 36:59

Dileep Karri: very good tweets overall, and get the best possible tweets for my use case, or whatever I am searching for.

37:07 - 37:16

Dileep Karri: So, I am saying that this is what I want. So, I'm trying to tell that I need some better sources overall than the usual sources that I'll keep getting.

37:18 - 37:31

Dileep Karri: Yes, so this is the thesis, is perplexity searches the wrong web. You want to bias retrieval towards high signal independent writing, and, you know, curated tweets, not SEO-optimized blog spam.

37:31 - 37:47

Dileep Karri: Okay, that is a great way to start... get started. So, before going further, right, biggest unknown isn't synthesis, it is how we actually get these store sources, etc. Before, let us talk source access, you give me a list of substacks.

37:47 - 37:53

Dileep Karri: or every query goes to Google, or hybrid, recommended, or

37:53 - 37:55

Dileep Karri: for all the platforms. So I'll go with...

37:56 - 38:03

Dileep Karri: hybrid recommended. For Twitter, we have to handle it separately, different beats, but we'll handle Twitter also, okay?

38:04 - 38:09

Dileep Karri: Are you guys seeing this? I am not jumping in and saying, okay, here are my features. I am first.

38:09 - 38:26

Dileep Karri: trying to understand what is it that I want to build, and I'm setting up a interview between me and Claudeko, okay? So it's an interview which is happening, so that we can go into the interview and try to do that.

38:27 - 38:32

Dileep Karri: Now, Twitter, which is a harder problem, the X API, is,

38:32 - 38:48

Dileep Karri: expensive, the scraping is fragile. For, you know, the... this thing, curated accounts only, you give me a list of accounts, then it can do this so-and-so. Search the firehouse.

38:49 - 39:00

Dileep Karri: Pay for X API tire, let users do real keyword search across Twitter. Pro maximum coverage, con \$200 per month, cap queries will still drown in noise.

39:00 - 39:05

Dileep Karri: Hybrid, curated accounts indexed locally, plus on-demand search via scraping service.

39:05 - 39:15

Dileep Karri: When you want broader coverage. So, acknowledge it's a different beast, and we can do this, okay? So, I will say, can...

39:15 - 39:16

Dileep Karri: Appify.

39:17 - 39:18

Dileep Karri: Help.

39:19 - 39:22

Dileep Karri: Emm... Twitter scraping.

39:24 - 39:37

Dileep Karri: I'm just checking if Amplify could help in Twitter scraping. By the way, I have not really prepared, prepared. I want to build it on the fly, and I just want to check if I am able to build this out overall.

39:38 - 39:47

Dileep Karri: Okay? The popular ones are available, they can pull user timeline, search results, etc. Then what works well, so will show.

39:48 - 39:52

Dileep Karri: So, let us say... let us go with Amplify.

40:00 - 40:05

Dileep Karri: Okay, so when I'm using Appify, I am kind of working with

40:06 - 40:17

Dileep Karri: a different tool, you can use whichever tools that you want, okay? Now, instead of Cloud Code, can I use codecs, can I use anything? You can use anything that you want.

40:20 - 40:39

Dileep Karri: Okay, so logged in Appify for Twitter, hybrid. Now the interaction model, faster, better, perplexity, etc, and all that. Then it is saying the, research workspace. Each query opens a session where you see the answer plus the raw sources in the sidebar.

40:39 - 40:48

Dileep Karri: Feed plus ask, or just an API and CLI. Type a question, get synthesized answer with citations, etc.

40:48 - 40:53

Dileep Karri: I will go with A, like a better, faster perplexity. I'll call it super complexity.

41:11 - 41:20

Dileep Karri: Yeah, we can go with this. Then, I will say go for a local app only.

41:29 - 41:36

Dileep Karri: So, with the local app, what happens is, when I'm trying to do scraping, if I shut down my laptop, the scraping stops.

41:38 - 41:41

Dileep Karri: Okay? Where, you know,

41:41 - 41:58

Dileep Karri: Instead of scraping pauses. Synthesis engine. What powers the actual read the sources and write a cited answer step? So you need a cloud frontier model, which is present, a cloud, cheap tier model, tiered routing, etc.

41:58 - 42:03

Dileep Karri: Okay? So, what I will say is.

42:03 - 42:08

Dileep Karri: I have already... so, I have already put in the open router API key.

42:08 - 42:13

Dileep Karri: So, I say I have already put in Open router, API.

42:14 - 42:17

Dileep Karri: I want to... News?

42:17 - 42:23

Dileep Karri: Sonic... 4.6... Fair enough.

42:25 - 42:29

Dileep Karri: So, I'll use the open router API key, and

42:29 - 42:46

Dileep Karri: As you all know, we put the API key inside .env file, okay? In the environment file, you put in the API key. If you are not knowing this, don't worry, you can, you know, try to check it later on and see what ENV is, and put your API keys there.

42:53 - 42:57

Dileep Karri: Okay? Good so far. Everybody is good.

42:59 - 43:06

Dileep Karri: Okay? At every time, you have got 4 source pools that could generate the results, the indexed letters.

43:07 - 43:18

Dileep Karri: Index Twitter, Google site fallback, and potentially general web. How should the system blend them? Now we are coming to system logic. A, parallel plus let the...

43:19 - 43:36

Dileep Karri: LLM sort it out, where you... every query fans out to all sources in parallel. Tiered with fallback, always try newsletters. If you fall for fewer than n strong matches, expand to index tweets, then Google fallback. Newsletters effectively get veto power.

43:36 - 43:58

Dileep Karri: Weighted blend, all sources run in parallel, but so results get rescored with a source weight. Newsletters 1, tweets 0.7, Google fallback 0.4, query wrote out, a small, classifier, tags a query, so on and so forth. It's recommendation is weighted blend, so I also like the weighted blend, overall, so I will go with C.

43:59 - 44:14

Dileep Karri: Okay? So I am not breaking my head in terms of what are the features I need to build. My skill brainstorming, along with cloud code, is giving me a bunch of questions. I just have to answer the questions, and I will be able to create the plan.

44:19 - 44:35

Dileep Karri: Okay? So, indexing freshness plus the Appify budget. So, there are the curated sources that need to be ingested on a schedule, and there are Appify charges per scrape overall, so there is some money that is involved.

44:35 - 44:43

Dileep Karri: So, you have conservative, that is there, then balanced, where you are trying to.

44:43 - 44:47

Dileep Karri: You know, do the curation and scraping, etc.

44:47 - 45:06

Dileep Karri: Then, or differ the answer, where you're doing. So, basically, the idea here is, if you are trying to scrape Twitter, sometimes, if you are doing very aggressive scraping, it'll charge a lot of money. So, it is asking me what is my, way of working with this.

45:07 - 45:10

Dileep Karri: Okay? So, I would say.

45:11 - 45:22

Dileep Karri: The way to do it is a balanced... I say B. B is my way of a balanced, recommended, etc, all through.

45:31 - 45:37

Dileep Karri: Okay, so now here is the explicit discussion around, you know,

45:38 - 45:46

Dileep Karri: the edge cases and inherent handling. Here are the cases that will actually happen, and the system needs their default behavior for each.

45:46 - 45:59

Dileep Karri: Empty, empty or very thin results, okay? So, in empty results, your default is you synthesize from whatever sources came back, plus explicitly tell you thin coverage on this.

45:59 - 46:03

Dileep Karri: Paywalled, you say, site what is accessible plus

46:03 - 46:16

Dileep Karri: flag a playboard snippet. Conflicting sources surface the disagreement explicitly. LLM hallucination, post-check pass. APFI, open router, any failure, degrade gracefully.

46:16 - 46:27

Dileep Karri: stale, curated, lists, something that are not useful anymore, like a passive feedback loop. So these are all the, accept the six defaults, okay?

46:28 - 46:34

Dileep Karri: Isaiah... Accepting... all defaults.

46:36 - 46:44

Dileep Karri: one thing, the scraping... should... happen on demand.

46:45 - 46:57

Dileep Karri: Okay, the scraping should happen on demand. I don't want the scraping to keep happening whenever it wants. Otherwise, my money will get drained. The scraping should happen on demand.

46:58 - 47:12

Dileep Karri: That means, only when I ask for a search, at that time, scrape with that scope and leave it, don't keep scraping things more and more, just scrape on what is required. Scraping is the last thing

47:15 - 47:20

Dileep Karri: overall, I don't typically want to worry or index more on scraping.

47:26 - 47:35

Dileep Karri: Okay? Whatever recommendations you're getting, you can push back and say, I don't want this, I want you to do this, so it can customize the recommendation also.

47:35 - 47:52

Dileep Karri: For me, because we are building this for education, I kind of allowed it, but typically when I do, I go through each recommendation, and if there is some other logic I want to add, I would do this, okay? No background indexing, okay? Nothing sits on decks.

47:52 - 47:59

Dileep Karri: A query comes in, system fans out right then to fetch what it needs, etc. All that.

47:59 - 48:18

Dileep Karri: Then, trade-offs of this, each query is genuinely fresh. Query latency might go up, it is fine. Appify costs from daily budget to query per query, so this is fine. We do semantic search across a, corpus budget, top 20 articles vectors on it, volumes. We don't need a vector store anyway.

48:18 - 48:22

Dileep Karri: The passive feedback loop still kind of works.

48:23 - 48:28

Dileep Karri: Okay, so I have the passive feedback loop, which still works.

48:28 - 48:29

Dileep Karri: Okay?

48:29 - 48:49

Dileep Karri: So, now, one ambiguity to real dog. When you say scraping on demand only, do you mean all fetching, or specifically the paid scraping? Because RSS is free and instant, so background polling costs nothing, but you might be saying no background anything, okay? Truly nothing in background, or fee background, okay? Paid scraping on demand only.

48:50 - 48:51

Dileep Karri: So, I'll clarify.

48:52 - 49:02

Dileep Karri: I am saying free background is fine, but paid scraping on demand only. We also have to give the Appify API key, absolutely.

49:07 - 49:16

Dileep Karri: Okay, so now we are doing this. The next thing is, now it is going to propose architectural approaches.

49:16 - 49:21

Dileep Karri: What are the various architectural approaches that we can use?

49:21 - 49:39

Dileep Karri: So, approach 1, thin orchestrator, hybrid retrieval, or pure on-demand. So, it is saying thin orchestrator is my recommendation, right? SQLite FTS5 query against index parameters, Google programmer will search API with

49:39 - 49:49

Dileep Karri: This Amplify Twitter search actor call, source preference lookup. So, it is kind of giving, the recommendations, okay? So, this is,

49:49 - 50:00

Dileep Karri: Overall, it is, what it is. Then, I've got hybrid retrieval, I have got pure on-demand, etc. So, let us pick Approach 1, as per recommended by the system.

50:01 - 50:10

Dileep Karri: Okay, now when you try it in any other platform, it will be slightly different overall, but, you know, this is exactly how it is.

50:12 - 50:15

Dileep Karri: This is a superpower skill that I am using.

50:19 - 50:21

Dileep Karri: Okay? Now you see?

50:21 - 50:39

Dileep Karri: It is now bringing the architecture review, where it is saying frontend plus API, Next.js, storage, SQLite plus something something, I don't even know what it means. SQLite, I know. It is a something. Background work, it is put in. Launch services.

50:40 - 50:51

Dileep Karri: Okay? Then, you have boxes and arrows. So, basically, it is saying that you have the browser, you have the orchestrator, you have the SQLite.

50:51 - 50:55

Dileep Karri: Google Search, Appify, Open Router, etc.

50:55 - 50:59

Dileep Karri: And, you know, I have this shape, etc.

51:00 - 51:12

Dileep Karri: I'll say, sometimes... Google search... might not work.

51:14 - 51:24

Dileep Karri: So, use one of the search... in Open Router itself.

51:28 - 51:31

Dileep Karri: A sonar model.

51:39 - 51:46

Dileep Karri: Okay, so I am kind of telling that in open router itself, there is a model that I try to use that itself.

51:46 - 52:04

Dileep Karri: See, in some cases, you will find the questions to be too technical, so then you can say that, see, I am a non-technical person. Explain to me to a non-technical person, and tell me what should I typically choose. Even at every step, right, AI itself is kind of trying to work with the same.

52:06 - 52:21

Dileep Karri: And if you're thinking about how do I install the skill, you just have to go to the GitHub of the skill superpowers, okay? And that superpower skill link, you need to put it in Cloud Code, it will do the installation itself.

52:21 - 52:28

Dileep Karri: Okay, don't have to worry about it. How to install a skill inside Cloud Code? Google for it, it will tell you exactly what to do.

52:29 - 52:33

Dileep Karri: Okay? So, I will say Sonar replaces Google.

52:33 - 52:35

Dileep Karri: I'll go with option.

52:35 - 52:41

Dileep Karri: Two, I want to go with Sonar replacing Google entirely.

52:47 - 52:49

Dileep Karri: Yeah, skill.sh also you can use.

52:54 - 53:04

Dileep Karri: So, why I'm using sonar is very simple. Sonar is by perplexity. I am trying to build a better perplexity, so I'm using sonar for now.

53:13 - 53:18

Dileep Karri: Okay? So... It is building,

53:20 - 53:28

Dileep Karri: everything. So, I told useSonar, it is my knowledge in which I told useSonar, that is exactly what I have done.

53:49 - 53:56

Dileep Karri: Okay, so it has told me multiple things. Now I'll tell you how, if you are a non-tech person, how to deal with this, okay?

53:57 - 54:17

Dileep Karri: See, I am a completely non-tech person, I don't even understand half of what you have said with me. So, can you, at least simplify this for me and tell me that you are on the right track, and where would you like me to provide some little bit of direction overall?

54:21 - 54:26

Dileep Karri: Okay? And I'm saying that, yeah, I'm a non-tech person, so,

54:26 - 54:28

Dileep Karri: Whatever you're saying is going above my head.

54:32 - 54:39

Dileep Karri: Okay, so now it is, saying the, reset for, like, a normal product.

54:44 - 54:54

Dileep Karri: You see here, it is writing the user role, it is writing a memory that, you know, I should put plain English overall, and it is writing all of that.

54:56 - 55:05

Dileep Karri: So, whenever you feel your AI agent is going very technical, put this prompt to get it back on a non-technical track.

55:06 - 55:23

Dileep Karri: Okay? For example, picture a search bar that lives on your laptop, that is what you're doing. What makes it different from Purplexity is where it looks for answers, your trusted newsletters, your Twitter, your wider web, etc. And, this is what it is.

55:24 - 55:31

Dileep Karri: Am I on the right track? Yes, I think so, but you will be the judge once you see it working. The shape matches what you said.

55:31 - 55:43

Dileep Karri: Okay? Now, there is one thing which I'll do, just to be on the safe side, which is, I will give it some, you know, design.md.

55:43 - 55:47

Dileep Karri: Okay? So there is this design system that I like.

55:48 - 55:55

Dileep Karri: Okay, so it is a new software that I found called, styles.referrer.design.

55:56 - 55:59

Dileep Karri: Let me give that link to all of you, it's a free site.

56:05 - 56:15

Dileep Karri: Okay? Slides.referrer.com, and it is giving me the complete design system of a website like this. So, I also have

56:16 - 56:21

Dileep Karri: My superplexity to kind of follow this kind of a thing. I like this.

56:23 - 56:28

Dileep Karri: I will call... I'll copy this... Design.md.

56:28 - 56:33

Dileep Karri: And what I'll do is, I will go back to Windsurf, I'll...

56:33 - 56:39

Dileep Karri: drop it over here, and I'll say, use the above

56:44 - 56:46

Dileep Karri: design.md.

56:46 - 56:48

Dileep Karri: as reference.

56:48 - 56:57

Dileep Karri: And building the... UI for... Super flexible.

57:08 - 57:21

Dileep Karri: Okay, so what I have done is, I went to ref... styles.refer.design, I copied the design.md prompt, and just put it over there, which is for the UI direction.

57:23 - 57:27

Dileep Karri: Okay, the newsletter list, I will, kind of, give it.

57:27 - 57:28

Dileep Karri: And,

57:39 - 57:48

Dileep Karri: Folks, I am using a superpower squad skill, simple Google search, kindly do the Google search, you will get the superpowers Claude Skill.

57:52 - 57:57

Dileep Karri: Okay, so I say, yes, allow all edits.

57:57 - 58:01

Dileep Karri: So now, I am writing the style reference for everything.

58:17 - 58:22

Dileep Karri: Okay, so now I have newsletters, Twitter handles, and the top 10 domains.

58:22 - 58:46

Dileep Karri: So I can say, I'm going to mainly ask about AI-related questions only. So, get me the top Substack newsletters of AI, beehive newsletters of AI, accounts of Twitter with respect to AI, and maybe the top 10 domains, so that you can do it. So I will ask you to figure it out, search yourself, and

58:46 - 58:47

Dileep Karri: Try to have that cliched.

58:55 - 59:12

Dileep Karri: Okay, so I'm, I'm telling... ask the AI questions only. So now, it is only going to search the internet on the best AI sources, right? It is searching for whatever is required, and it will only get all of the search as required overall.

59:26 - 59:30

Dileep Karri: Somebody's saying, why not an outskill should show up?

59:30 - 59:32

Dileep Karri: We are not that big yet.

59:43 - [01:00:02]

Dileep Karri: Okay, so web search is happening, I am collecting the list of sources. So what I want you to understand is, here is, in this entire process that we are doing, we have not... we

are just making the plan only, okay? So this making the plan step becomes quite important, okay?

[01:00:03] - [01:00:07]

Dileep Karri: And, you know, we are able to see that.

[01:00:07] - [01:00:09]

Dileep Karri: I think my screen should be visible.

[01:00:13] - [01:00:20]

Dileep Karri: Yeah, I think my screen is visible only. Maybe you can check it, on your end, who is facing those issues.

[01:00:24] - [01:00:29]

Dileep Karri: Okay, so now everything is good. I will go ahead with it for now, okay?

[01:00:30] - [01:00:34]

Dileep Karri: Let's... Go ahead.

[01:00:36] - [01:00:36]

Dileep Karri: I don't know.

[01:00:42] - [01:00:45]

Dileep Karri: So now, it is going to write the complete spec.

[01:00:46] - [01:00:51]

Dileep Karri: We haven't written any single line of code, I'm still doing the planning only.

[01:01:00] - [01:01:06]

Dileep Karri: So, what I'm doing is, I'm just doing the basic planning. I have not done anything yet.

[01:01:54] - [01:02:09]

Dileep Karri: So, what you need to understand is, every Markdown file has its own, use, right? For example, design.md talks about the design, then, you have skill.md talks about the skill, etc.

[01:02:09] - [01:02:19]

Dileep Karri: For those of you searching for the superpowers, you should search for Obra Superpowers, O-B-R-A Obra Superpowers, okay? That is the one you should search for.

[01:02:20] - [01:02:27]

Dileep Karri: Look at the GitHub star votes and everything. It has a very good high number of votes.

[01:02:27] - [01:02:29]

Dileep Karri: I think that's what you should look at.

[01:02:31] - [01:02:34]

Dileep Karri: So you see here, it is writing the spec now.

[01:02:35] - [01:02:44]

Dileep Karri: Okay? So it is writing the spec now, or the specification. Once we write a specification, then the agentic build will get started.

[01:02:58] - [01:03:09]

Dileep Karri: Team, can you put the link of the GitHub overall? So, so that OBRA superpowers that people are putting in the chat, can you put it to everyone, please, in the link?

[01:03:29] - [01:03:36]

Dileep Karri: Yeah, everybody's putting, I just... Take it... I think my son...

[01:03:58] - [01:04:01]

Dileep Karri: Yeah, this is the one, you can check it out.

[01:04:07] - [01:04:10]

Dileep Karri: Okay, so it has built out the spec.

[01:04:10] - [01:04:14]

Dileep Karri: So, what we need to do is go here.

[01:04:14] - [01:04:21]

Dileep Karri: And go to Docs, go to Super Pars, and this is the Super Plexity Design Doc.

[01:04:22] - [01:04:35]

Dileep Karri: Look at this, the product summary, the scope, the architecture, the stack, the repository, right? The components, Storage, retrieval...

[01:04:35] - [01:04:39]

Dileep Karri: Okay? Everything has been written, the content feature, the synthesis.

[01:04:41] - [01:04:48]

Dileep Karri: the feedback API, all the plan. So, it is just a plan right now, okay?

[01:04:49] - [01:04:51]

Dileep Karri: We have not done.

[01:04:51] - [01:04:57]

Dileep Karri: any piece of crew coding at all. It is just a simple plan.

[01:04:57] - [01:05:15]

Dileep Karri: Okay? So, I... we also need to add the Appify API token, which I'll do post this, and then we will start running with it. So, the way you have to do it is, you have to read through this complete plan, and you say that, hey, you know what, the plan is pretty good.

[01:05:15] - [01:05:22]

Dileep Karri: Okay, so that's what you'll do. So you'll say here, okay, plan is... Good to go.

[01:05:23] - [01:05:33]

Dileep Karri: If you have anything else that you want to do, you can tell that, make this change, make that change, etc, and you can do all of this.

[01:05:35] - [01:05:41]

Dileep Karri: So now this, it will get handed over to a writing plans skill.

[01:05:41] - [01:05:47]

Dileep Karri: So that it can be broken into a executable, implementable plan.

[01:05:49] - [01:05:59]

Dileep Karri: Alright, for folks who are asking how to install this, etc, you just have to drop the GitHub link into your cloud code and say, install it, the skill will get installed, you don't have to do anything.

[01:06:02] - [01:06:06]

Dileep Karri: Okay, so I have specs written, now I am kind of writing the plans.

[01:06:20] - [01:06:27]

Dileep Karri: So basically, what we are trying to do here is, specs are the specifications.

[01:06:27] - [01:06:35]

Dileep Karri: Plans are, you know, more advanced version of it. Actually, the plans are getting written as we speak.

[01:06:35] - [01:06:51]

Dileep Karri: So, you can look at the plans, and you'll understand, you know, you know, how we can... how the plants and specs are different. So, once I build it, I will actually show you how the specifications and plans are very, very different from each other.

[01:07:07] - [01:07:24]

Dileep Karri: So, it is like, spec is like a user requirement, that you have kind of gathered all the user requirements at one place. Now, those user requirements, you will convert it into technical requirements, so that an agent can understand even more better.

[01:07:25] - [01:07:26]

Dileep Karri: Okay?

[01:07:38] - [01:07:42]

Dileep Karri: You can see here, plan. Okay, still writing the plan.

[01:07:45] - [01:07:55]

Dileep Karri: So, once the plan is written right, what will happen is we will just say, hey, implement this plan to Windsorf, and Windsorf will, implement that plan.

[01:07:55] - [01:08:09]

Dileep Karri: Why... the reason why I'm using Claude Code for planning this is because Claude Opus is one of the best planning, things that are, you know, kind of available. We can just use it to

[01:08:09] - [01:08:28]

Dileep Karri: do that. And in the plans itself, for those who are technical, right, user stories, print, etc, all that, that will be written as part of the plans itself. So you don't have to really worry about that. All of that will be there, and then the agent is intelligent enough to kind of pick up the plans

[01:08:28] - [01:08:30]

Dileep Karri: And, you know, try working on the same.

[01:08:37] - [01:08:56]

Dileep Karri: So, as it is writing, right, I wanted to talk about one of the features which is available, which is called, Deep Wiki, where, anytime, this is something which is very, you know, kind of done inside, available inside, you know.

[01:08:56] - [01:09:03]

Dileep Karri: Wind surf, wherein you can go to any part of the code, and it will understand, everything overall.

[01:09:05] - [01:09:10]

Dileep Karri: One of the reasons why I would prefer to go with this approach is Claude is super costly.

[01:09:11] - [01:09:26]

Dileep Karri: Okay, if I let Claude develop everything, right, for example, recently, in the engineering cohort, how many people from the engineering cohort here, the recent engineering cohort, program, anybody here from the engineering cohort?

[01:09:28] - [01:09:40]

Dileep Karri: Okay, hey folks. So, for those of you from the engineering cohort, right, you would... you remember, I used Cloud Code. It had actually run out of usage limits 4 times.

[01:09:41] - [01:09:49]

Dileep Karri: Okay? It has run out of usage limits 4 times. So, 4 times, it says user limit reached, then I wait for a few hours.

[01:09:51] - [01:09:54]

Dileep Karri: resume again. Again, it'll run out of user limit.

[01:09:55] - [01:09:59]

Dileep Karri: Wait for a few more hours. Again, it'll run out of user limit.

[01:10:00] - [01:10:05]

Dileep Karri: I wait for a few more hours, and I keep continuing it same over and over.

[01:10:05] - [01:10:18]

Dileep Karri: Right? So that's why, using EventServe is slightly better overall than, everything else, right? Superpower is slightly better, doesn't use so much of

[01:10:18] - [01:10:23]

Dileep Karri: tokens as compared to other frameworks, so I can kind of...

[01:10:23] - [01:10:25]

Dileep Karri: Are trying to do it over here.

[01:10:26] - [01:10:37]

Dileep Karri: For those of you who are wondering what is happening, first, we made a specification. From the specification, we are making the plants. From the plants, we will do the coding.

[01:10:38] - [01:10:41]

Dileep Karri: Okay, this session will be slightly...

[01:10:41] - [01:10:44]

Dileep Karri: You know, I will say.

[01:10:44] - [01:10:52]

Dileep Karri: slightly in towards the advanced stuff, because you're using Windsurf, Cloud Code, Devon, everything together, but

[01:10:52] - [01:11:09]

Dileep Karri: See, I don't... I'm not expecting everybody to know everything. You are not expected to learn cursor, windsurf, anti-gravity, everything, etc. You can pick one tool stack, go deep into it, that is more than sufficient. You don't have to, remember everything.

[01:11:09] - [01:11:12]

Dileep Karri: But from our point of view, we want to teach

[01:11:13] - [01:11:19]

Dileep Karri: Building with different applications, so that you are aware that, okay, this also exists overall.

[01:11:23] - [01:11:41]

Dileep Karri: Okay? For those of you wondering, Superpower Skill is trying to build the plan and make the specifications for our superplexity, okay? By the way, we haven't written or we haven't attempted to write a single line of code until now.

[01:11:41] - [01:11:49]

Dileep Karri: Okay? We have not written a single line of code, all that we are doing is trying to get it, okay?

[01:12:00] - [01:12:04]

Dileep Karri: So this is... this will take a few minutes of time.

[01:12:05] - [01:12:17]

Dileep Karri: Okay? So, I'll just take a quick 2-3 minute break for my headache to a little bit settle. I think it's, catching up. So by the... in the meanwhile, let it ride the plants.

[01:12:20] - [01:12:22]

Dileep Karri: We'll take a quick, 3-minute break.

[01:12:37] - [01:12:48]

Kartik_Outskill: Okay, folks, since Dilip has taken a break, just a small announcement from my side. We talked about Alumni Forge yesterday.

[01:12:49] - [01:13:08]

Kartik_Outskill: And, the Alumni Forge is live on your LMS, so you can go ahead and check it. Don't check it now, please check it post this session. And if you face any query, any concern, if you are not able to access it, I'm sharing, one link

[01:13:09] - [01:13:21]

Kartik_Outskill: in the chat, it's an issue form. If you are facing any issue logging in, please let us know over here. And closing the chat for just a bit, just so that you all can

[01:13:21] - [01:13:25]

Kartik_Outskill: Get the link, and, you...

[01:13:25] - [01:13:29]

Kartik_Outskill: You can just fill out the form if you're not able to see it. Try to do it post the session.

[01:13:30] - [01:13:32]

Kartik_Outskill: Till the point, Dilip is back. Thanks.

[01:16:07] - [01:16:10]

Dileep Karri: Alright, so... hi folks, so...

[01:16:10] - [01:16:15]

Dileep Karri: What has happened right now? We have built the plan also, let us look at the plan.

[01:16:16] - [01:16:26]

Dileep Karri: Okay, look at this plan, okay? It is, try to, you know, having the phase one foundation, then it is creating the package.

[01:16:26] - [01:16:45]

Dileep Karri: It is putting all the steps, etc, all that, okay? So we have the multiple plans that are available. So, do you now understand the difference between a plan and the specification? I hope this makes it clear. Specs is in proper English, okay? There is a proper English

[01:16:45] - [01:17:09]

Dileep Karri: inside the specification, whereas the plan is very technical, okay? The plan is not something you would understand as a non-technical person. Plan is something that the agent will understand. So, plan is for the agent, and then, you know, the specs is for you to verify and see if everything is fine or not.

[01:17:12] - [01:17:20]

Dileep Karri: Okay? So, this is what is happening. Now, I will come, because my plan is ready.

[01:17:21] - [01:17:25]

Dileep Karri: Okay? My plan is ready, now is the time for me to build it out.

[01:17:27] - [01:17:35]

Dileep Karri: So, the way I will do it is, any file that is present in this workspace, I can request it by using app.

[01:17:36] - [01:17:48]

Dileep Karri: So, I can go into the files, and in the files, right, I can go and pick this particular plan. This is the plan, this is the file.

[01:17:49] - [01:17:57]

Dileep Karri: Overall, okay? So this is the file, and I say, implement... this... Fight.

[01:17:59] - [01:18:13]

Dileep Karri: Okay? So, I have the complete plan available and ready for me. I can say, implement the file directly. See, the code review and everything will happen once we've written the code. We have not written any code yet.

[01:18:15] - [01:18:19]

Dileep Karri: Okay, so there you go. It has created a to-do list.

[01:18:20] - [01:18:24]

Dileep Karri: And it is saying that it is going to go with a sub-agent-driven development.

[01:18:25] - [01:18:26]

Dileep Karri: So, run it.

[01:18:26] - [01:18:38]

Dileep Karri: So, it will start, you know, multiple sub-agents are going to work on it and, try to, you know, create this complete file.

[01:18:43] - [01:19:03]

Dileep Karri: So, proper development, yes. So, wire coding is for prototyping. This will be closer to a proper development, because you're putting in quite some effort. So, you see here, the sub-agents are writing your code over here, and you can see the code getting written over here on the side.

[01:19:04] - [01:19:10]

Dileep Karri: Right? So, right now, this is a different agent. This is not exactly Devon.

[01:19:10] - [01:19:14]

Dileep Karri: Right? And you can, think about this. So, by the way, folks.

[01:19:15] - [01:19:21]

Dileep Karri: not transfer the plan from Claude to Windsorf. Claude made the plan.

[01:19:21] - [01:19:40]

Dileep Karri: Okay, Claude made the plan, and that is how, you know, you know, Claude has made the fan plan in the same folder. For example, there's this folder called Docs, in Docs, in Plans. Claude has made it. I just referenced that plan, and just made it work, that's all.

[01:19:46] - [01:19:59]

Dileep Karri: Folks, for the sessions, I might not be able to share the whiteboard for everything, so if something is missing, just bear with it, you just have to go through the recording, and you should be able to understand that.

[01:20:02] - [01:20:03]

Dileep Karri: Okay.

[01:20:06] - [01:20:10]

Dileep Karri: So, it is building the, rest of the stuff.

[01:20:11] - [01:20:31]

Dileep Karri: If I want, I can install superpowers inside Windsurf also, but the reason I did not do that is, I want to use superpowers with Claude Opus. That is what I want. I want that

system. But if I want to create superpowers with Cloud Opus, Windsurf has been kind of blocked out of Claude Corpus.

[01:20:31] - [01:20:34]

Dileep Karri: And I have to give a separate anthropic key for it.

[01:20:34] - [01:20:40]

Dileep Karri: That was what was the case maybe a month back when I checked it out. So instead of getting through all that headache.

[01:20:40] - [01:20:49]

Dileep Karri: with having a lateral headache right now, okay? Instead of going with all through that headache, right, I am just saying, I use Claude code.

[01:20:49] - [01:20:54]

Dileep Karri: get the, plan, and then I will kind of implement the plan.

[01:20:57] - [01:21:04]

Dileep Karri: Alright, so this will take some time, okay? This will going to take some time, for all of you.

[01:21:05] - [01:21:12]

Dileep Karri: Okay, so let us keep it going. In the meanwhile, what I'll do is, I will show you how Devon works.

[01:21:12] - [01:21:16]

Dileep Karri: Okay, we'll take a quick look at Devon.

[01:21:20] - [01:21:22]

Dileep Karri: So, this is Devin, okay?

[01:21:23] - [01:21:30]

Dileep Karri: And, inside Devon, when you install your Devon, etc, and all that, you will, kind of,

[01:21:30] - [01:21:32]

Dileep Karri: use,

[01:21:33] - [01:21:52]

Dileep Karri: you will see something like this. And I think somebody's saying in the chat, right, that Windsurf plus Devon plus Opus, it works very fine. That's actually good. So, when you go to

Devon, this is how you'll see Devon. There is a command line approach also, but I'm kind of using this approach.

[01:21:52] - [01:22:03]

Dileep Karri: And what I will do is, I will actually take one of my, things that I have built, which is Model Console, okay?

[01:22:03] - [01:22:12]

Dileep Karri: So, I have picked Model Console for my thing, and now I will ask Devin to kind of go with this.

[01:22:15] - [01:22:18]

Dileep Karri: Can you look at my repository of

[01:22:18] - [01:22:37]

Dileep Karri: model console, and go through the repository and tell me if there are any bugs overall, and is there a way to make my code even better than what it is currently? Go through the complete context, discuss with me before you go into the next steps.

[01:22:39] - [01:22:46]

Dileep Karri: So, Devon is a... see, Devil and Windsorf are two companies, but now they are part of the same company, Cognition.

[01:22:46] - [01:23:00]

Dileep Karri: That is how, Devin kind of works, right? So that's why, to make it simple, I'm using Devon separate from Windsurf, so that it doesn't cause any conclusion, sorry, confusion, right? That is what is happening.

[01:23:00] - [01:23:10]

Dileep Karri: So here, I'm directly reading my GitHub through Devin, and Devon is now trying to set up my repository. So Devon is very good at existing code.

[01:23:10] - [01:23:16]

Dileep Karri: So when you have got some old legacy existing code, I think Devon is...

[01:23:17] - [01:23:27]

Dileep Karri: much better. If you want to, write something, then wind surf is better. Devin is an autonomous coding agent, so what happens when Devon is?

[01:23:28] - [01:23:41]

Dileep Karri: This is the system inside Devon. So, this is a cloud system, okay? So it is getting this repository into the cloud system, and in its own system, it is trying to work.

[01:23:42] - [01:23:50]

Dileep Karri: Okay, you can upload your own code from a zip folder also, but the better way is to work like this.

[01:23:50] - [01:23:55]

Dileep Karri: put it in GitHub, so it can work directly on your GitHub.

[01:23:56] - [01:24:10]

Dileep Karri: Okay? For engineering folks, engineering folks who are present here, what Devon can also do is, it can connect with your Slack, it can address and answer a lot of things, like...

[01:24:10] - [01:24:19]

Dileep Karri: You know, it can connect and answer, pull requests automatically, and if you say, hey, Devin, this is a bug, take care of it, it can...

[01:24:19] - [01:24:26]

Dileep Karri: Create its own branch, work on the bug, raise a pull request, which you can then merge with the main code.

[01:24:28] - [01:24:47]

Dileep Karri: Devon can work on local photos, but its power is when it can work on the web. So the best part about Devon is, even when you shut down your laptop, okay, Devon is still working. So, because Devon is on the cloud. Now, if I shut down my laptop, my wind surf will stop, because Windsurf is on local system.

[01:24:47] - [01:25:01]

Dileep Karri: But Devon, on the other hand, is running on the cloud. So that is the difference. Devon is a cloud software engineering agent, whereas Windsurf is an IDE, which kind of works locally overall.

[01:25:08] - [01:25:14]

Dileep Karri: Okay? Look at this. It is giving me the review report, where it is saying bugs.

[01:25:14] - [01:25:20]

Dileep Karri: Duplicate prompt sent to the synthesizer. Wastes... waste tokens and may confuse the judge.

[01:25:20] - [01:25:32]

Dileep Karri: That is one. Then, env.example syntil doesn't match the guard, something has happened, okay? Then, it has kind of used...

[01:25:32] - [01:25:47]

Dileep Karri: everything, okay? So the core base leaves the company network in a way, yes, but if you talk to the Devint team, right, in the enterprise version, it doesn't happen. In the enterprise version, you can kind of figure it out better.

[01:25:48] - [01:25:52]

Dileep Karri: You see here, right, it has given me the complete... all the bugs.

[01:25:52] - [01:26:02]

Dileep Karri: Every kind of... suggestions that it wants to do, it is giving me missing features, improvement solutions.

[01:26:03] - [01:26:05]

Dileep Karri: Etc. So, it has found 4 bugs.

[01:26:08] - [01:26:10]

Dileep Karri: Code quality 7 issues.

[01:26:11] - [01:26:13]

Dileep Karri: Missing features?

[01:26:16] - [01:26:18]

Dileep Karri: Top improvement ideas?

[01:26:18] - [01:26:21]

Dileep Karri: And this is the one.

[01:26:23] - [01:26:42]

Dileep Karri: Okay, so now, I... it is the complete code review report. Okay, so this is the complete report, code review, code quality issues, and everything. See, one thing is, Devon is a software engineering agent, so it is meant more for software engineers.

[01:26:42] - [01:27:01]

Dileep Karri: But even non-PA software engineers can also use it. It is pretty decent that way, but I found that it is more technical, and see, again, look at the founder, right? He's, like, a prolific coder, so he kind of thought about what his workflows are, what these are, it can do.

[01:27:01] - [01:27:06]

Dileep Karri: And for somebody who is asking questions like, can we send these bugs to Sentry, etc.

[01:27:06] - [01:27:16]

Dileep Karri: right, you can do that, you will need to have a Sentry MCP server set up. If you do that, it could, you know,

[01:27:16] - [01:27:18]

Dileep Karri: That's what it is.

[01:27:19] - [01:27:23]

Dileep Karri: Okay, it's awaiting instructions. I will say, go ahead.

[01:27:24] - [01:27:28]

Dileep Karri: And, fix, there.

[01:27:28] - [01:27:30]

Dileep Karri: Go ahead and fix it.

[01:27:34] - [01:27:44]

Dileep Karri: So, Devin is much better at fixing the bugs and everything, etc. So, I would, kind of run it through, okay?

[01:27:44] - [01:28:00]

Dileep Karri: See, I will use some terms based on some doubts people are asking. If you're not understanding it, it's okay. If there is something that you need to understand, I will tell you, okay? So, if I'm not saying something, just ignore it and focus on what I'm kind of teaching all of you.

[01:28:03] - [01:28:10]

Dileep Karri: Okay, so, it has created 15 tasks, so these are the 15 tasks that

[01:28:10] - [01:28:12]

Dileep Karri: It has, done.

[01:28:15] - [01:28:21]

Dileep Karri: Yes, Devon and Windsor work separately, but now, they are actively working to merge it.

[01:28:22] - [01:28:32]

Dileep Karri: Okay? I used model console simply to show that on an existing code, this can work really well. That is exactly how it is.

[01:28:46] - [01:28:53]

Dileep Karri: See, I have used multiple coding agents. I have used Devon, I used Cloud Code, I used Codex.

[01:28:53] - [01:28:55]

Dileep Karri: I used multiple things.

[01:28:56] - [01:28:59]

Dileep Karri: So, I felt all of them were good.

[01:28:59] - [01:29:17]

Dileep Karri: In terms of coding finesse, the finesse that is required, I found that Devon was pretty good, in terms of the agentic finesse, purely on coding. But if you want an all-rounder, right, somebody who can work on code and non-code also, then Cloud Code and Codex

[01:29:17] - [01:29:20]

Dileep Karri: Would fit the bill. Bill.

[01:29:24] - [01:29:29]

Dileep Karri: Yes, so the model console is something I made in the last sprint with Claude Core. I just...

[01:29:30] - [01:29:34]

Dileep Karri: You know, I'm using it only to just see if there is something that could be improved.

[01:29:35] - [01:29:45]

Dileep Karri: Okay, this one has nothing to do with what you're building. This was something I built in the previous sprint. I'm just using it to show that Devon can be used.

[01:29:45] - [01:30:03]

Dileep Karri: to check your code and fix the bugs, it is very good in existing code. So, for companies who have legacy code, say, in very old framework and you want to migrate, say you want to migrate from Angular to React, etc, there, I would really suggest Devin. It's pretty, pretty good.

[01:30:05] - [01:30:14]

Dileep Karri: So, Devin, I think, underneath, you'll have to check what does it use. It uses a mixture, I guess. It doesn't use single LLM.

[01:30:31] - [01:30:39]

Dileep Karri: So, if you have legacy apps, I would always recommend you to go with Devon, because it is pretty well trained, etc. on that.

[01:30:44] - [01:30:51]

Dileep Karri: Okay, so this is... Getting billed through and through. Let us check on our application.

[01:30:52] - [01:30:54]

Dileep Karri: Okay, so it's asking me something.

[01:31:02] - [01:31:06]

Dileep Karri: So now it is creating the testing files. All the test files.

[01:31:06] - [01:31:09]

Dileep Karri: It is kind of, building for us.

[01:31:24] - [01:31:29]

Dileep Karri: I think Devin has a built-in security audit, we'll do that also.

[01:31:29] - [01:31:33]

Dileep Karri: After this is done, we'll try to see if you can build that.

[01:31:39] - [01:31:52]

Dileep Karri: So, I have not specified any particular model. If you remember from yesterday, I am using the default adaptive models, okay? So, here there is adaptive. I'm going with adaptive models.

[01:32:20] - [01:32:27]

Dileep Karri: So, it is also going to write its own tests and try to see everything that can be done.

[01:33:04] - [01:33:22]

Dileep Karri: See, assume that anything that you want to do in Devon or Windsorf, assume that you have to be on a paid plan, okay? So, just assume that it is a paid plan, okay? I am on the trial plan, but paid plan is something. Here, Claude Code is no longer at work.

[01:33:22] - [01:33:27]

Dileep Karri: Whatever is getting built is all built via Windsorf itself.

[01:33:59] - [01:34:05]

Dileep Karri: So, different commands keep popping up, I'll just allow it to... Do it, right?

[01:34:21] - [01:34:24]

Dileep Karri: So there is some errors, it is trying to correct the error.

[01:34:50] - [01:34:53]

Dileep Karri: So, a few errors were come, so it is now trying to fix it up.

[01:34:54] - [01:34:56]

Dileep Karri: Let us check on Devin, what's happening.

[01:34:58] - [01:34:59]

Dileep Karri: Okay?

[01:34:59] - [01:35:00]

Dileep Karri: So...

[01:35:02] - [01:35:16]

Dileep Karri: So there you go, it is saying that, it has fixed bugs, you know, cloud quality and UX improvements. So here, a pull request has been created. So I'll say analyze.

[01:35:16] - [01:35:23]

Dileep Karri: What it does is, it will... Devon itself will analyze and tell me if everything is working fine.

[01:35:24] - [01:35:26]

Dileep Karri: If everything is fine.

[01:35:26] - [01:35:32]

Dileep Karri: It'll merge it with my main code. If something is not fine, it will not merge it.

[01:35:46] - [01:36:00]

Dileep Karri: By the way, for those of you wondering what model console is, Model Console is the perplexity feature where it can... any query you ask, it will debate with multiple models and give you the final answer. That is a model console.

[01:36:11] - [01:36:18]

Dileep Karri: So it is doing all the checks, it is doing all the CICD checks, etc.

[01:36:24] - [01:36:27]

Dileep Karri: Let us check on the test, what is happening.

[01:36:31] - [01:36:33]

Dileep Karri: Okay, this looks like it has...

[01:36:33] - [01:36:35]

Dileep Karri: Checked it, it's all working fine.

[01:36:56] - [01:36:59]

Dileep Karri: Okay, so I'll say start the app.

[01:37:35] - [01:37:43]

Dileep Karri: Okay, I didn't add the Twitter API yet, okay, so that's fine. So let me now open the... website.

[01:37:47] - [01:37:56]

Dileep Karri: There you go. We have a simple superplexity, where I'm asking, what do you want to research today? And I will say, I want to...

[01:37:57] - [01:38:08]

Dileep Karri: research... About... plot code... Okay, some... something like that. I just want to research about cloud code skills.

[01:38:13] - [01:38:20]

Dileep Karri: Okay, as I said before, because it is on-demand, it will take some time for it to do.

[01:38:22] - [01:38:26]

Dileep Karri: Okay, it's saying thin coverage, no usable sources found.

[01:38:26] - [01:38:41]

Dileep Karri: consider adding sources to configsources.yaml, so there is some error, we'll have to troubleshoot it, but okay. You know, I just showed you the complete process of how we were... how we were trying to fix this.

[01:38:45] - [01:38:53]

Dileep Karri: Okay? What I can do is, since I got this error, I'll copy this, I will go back to Windsurf.

[01:38:54] - [01:39:02]

Dileep Karri: And say... This is the... error I got.

[01:39:03] - [01:39:04]

Dileep Karri: Can you check?

[01:39:05] - [01:39:08]

Dileep Karri: What is the issue?

[01:39:22] - [01:39:37]

Dileep Karri: Okay, there is a problem. That is, because my database was empty, didn't have any newsletters. That is the issue that it has come, so it is now trying to, you know, run and index those newsletters.

[01:39:39] - [01:39:43]

Dileep Karri: Okay? Now, let us check on Devin to see what is happening there.

[01:40:08] - [01:40:11]

Dileep Karri: Edge ideally, should have caught that, but...

[01:40:12] - [01:40:27]

Dileep Karri: End of the day, somehow we did not catch. So that is how you do, right? Most of the edge cases should have been caught before, but some slipped through the tracks, so then you have, you know, you try to go back and try to fix that overall.

[01:40:35] - [01:40:36]

Dileep Karri: Okay.

[01:40:37] - [01:40:38]

Dileep Karri: Let's check on this...

[01:40:49] - [01:40:57]

Dileep Karri: So, it is doing the merge itself, but it is trying to fix it overall.

[01:41:01] - [01:41:16]

Dileep Karri: Okay, both are good. I would say both have their own place in the development lifecycle, right? I will not tell you that this is the best, you have to use only this. You can use different tools that you would want.

[01:41:16] - [01:41:24]

Dileep Karri: Okay, and you... you have to experiment and see which one works for you, and that's how you should be able to do that.

[01:41:44] - [01:41:55]

Dileep Karri: Okay, so now it is asking... towards... Latest... capabilities...

[01:42:11] - [01:42:13]

Dileep Karri: There you see all the sources.

[01:42:15] - [01:42:35]

Dileep Karri: Okay? The sources give a reasonable detailed picture of Cloud Code's current state, what Cloud Code is, the latest model, okay, little old sources. As you can see, it is saying 4.6, while we are at 4.7. Recent feature additions, how it compares to OpenAI's codecs.

[01:42:35] - [01:42:36]

Dileep Karri: broader significance.

[01:42:39] - [01:42:45]

Dileep Karri: And so on and so forth, okay? Still, some improvements have to be done.

[01:42:45] - [01:42:48]

Dileep Karri: But nevertheless, a decent start.

[01:42:49] - [01:42:51]

Dileep Karri: Right, so this is like an MVP.

[01:42:52] - [01:42:57]

Dileep Karri: A minimum viable product that you have built in this session.

[01:42:58] - [01:43:11]

Dileep Karri: Right now, it is in Markdown, so you'll have to say, you know, things like, render it as a proper document, don't keep it in Markdown. You have to keep giving it feedback and improve this application further.

[01:43:12] - [01:43:13]

Dileep Karri: Okay?

[01:43:15] - [01:43:18]

Dileep Karri: It is pretty decent, I know, because...

[01:43:18] - [01:43:30]

Dileep Karri: I have made a very good plan first, okay? I spent time on refining my plan, and once I refine my plan very well, everybody can execute it.

[01:43:31] - [01:43:44]

Dileep Karri: Okay? Even in management, right, people are kind of working on the plan. You make a great plan, and you tell people with muscle to execute it. You can execute it wherever you.

[01:43:45] - [01:43:49]

Dileep Karri: Okay, so let's check on Devin, what's happening.

[01:43:58] - [01:44:09]

Dileep Karri: look at this, so Devin, found, some bugs even when doing this. So, it has found those bugs, and it is now trying to push those bugs by fixing it.

[01:44:10] - [01:44:15]

Dileep Karri: Okay, so now I'll even show you on GitHub where we have...

[01:44:15] - [01:44:19]

Dileep Karri: So, I'll just go to my nakedump.com.

[01:44:21] - [01:44:27]

Dileep Karri: Okay, so in this, this is my... You know, repository.

[01:44:28] - [01:44:31]

Dileep Karri: Okay, if you look at this, there are two branches.

[01:44:32] - [01:44:37]

Dileep Karri: Okay? So this is the second branch, which is Devin's branch, which has been working.

[01:44:37] - [01:44:48]

Dileep Karri: So, if I open this branch, Okay? So, it can, you know, I can... How is it?

[01:44:48] - [01:44:49]

Dileep Karri: Mark, yeah.

[01:44:55] - [01:44:57]

Dileep Karri: So, this is a pull request.

[01:44:57] - [01:45:06]

Dileep Karri: Okay, so here I have the complete, you know, pull request-related, things that are happening.

[01:45:07] - [01:45:12]

Dileep Karri: Okay, sorcery is something that GitHub already has.

[01:45:12] - [01:45:30]

Dileep Karri: So, GitHub is working with that. So, if you see here, my AI is actually, you know, working with my, different, issues, and it is... Devin is kind of working with them and trying to fix all of it by itself.

[01:45:32] - [01:45:33]

Dileep Karri: Alright?

[01:45:35] - [01:45:41]

Dileep Karri: Thank you, folks, thanks for your time. I'm sorry today, due to headache, and not been able to give my 100%,

[01:45:42] - [01:45:51]

Dileep Karri: for the session, right? But I wanted to, like, complete, the topic, overall, and, you know, produce that.

[01:45:51] - [01:45:59]

Dileep Karri: So... Just FYI, I got a few DMs also on,

[01:45:59] - [01:46:04]

Dileep Karri: You know, some people asking about, there is this program called Catalyst.

[01:46:04] - [01:46:08]

Dileep Karri: And all that, and some people have already come on board.

[01:46:08] - [01:46:12]

Dileep Karri: So, we are in the base camp of Catalyst.

[01:46:12] - [01:46:26]

Dileep Karri: Okay, so we are in the base camp, we are doing the introductory sessions in the Catalyst C3 cohort. So what is the Catalyst program, if I had to put it in one to two lines? It's a program, you know, wherein,

[01:46:26] - [01:46:43]

Dileep Karri: So, we will go deeper into building, we will go deeper into building the skills that you have learned in your previous programs, number one, and then we will also go a lot into go-to-market strategies, how to monetize the product, etc, and all that.

[01:46:43] - [01:47:02]

Dileep Karri: Right? So if, anybody who has questions, like, how is it different from the fellowship, you are interested to go take this journey further, going ahead overall. So, right? So this could be a, good thing to ask. So, what we will do is.

[01:47:02] - [01:47:12]

Dileep Karri: Alright, we will drop the link to the calendars. We have limited last 2-3 seats, that's all. You can book the seat over there.

[01:47:12] - [01:47:14]

Dileep Karri: Right? So...

[01:47:14] - [01:47:23]

Dileep Karri: You can scan to block your seat. You can talk to our team to understand more about how is it different, whether it'll help or not.

[01:47:23] - [01:47:37]

Dileep Karri: This will help for people who want to go beyond skills and try to build something, and even launch it, market it, etc. So, that's exactly what we do in the program.

[01:47:38] - [01:47:58]

Dileep Karri: I think someone... Kunal, I saw your message. Why don't you write to the team, okay? We will try to sort the thing out, okay? Don't worry, we will... we are here, we'll keep doing the engagement, right? Again, no pressure if you're genuinely interested on going beyond the program. So, we have a mix of developers as well as non-developers.

[01:47:58] - [01:48:12]

Dileep Karri: Event developers also build their products and think about, you know, how do you launch it into market? What are the services you can provide to other people? With some, you know, it is the... this thing.

[01:48:12] - [01:48:17]

Dileep Karri: difference between the programs, etc. If you're interested, you can, you know.

[01:48:17] - [01:48:20]

Dileep Karri: Definitely, you know, kind of,

[01:48:21] - [01:48:31]

Dileep Karri: book your Calendly, talk a little bit about it. So this is a 6-month program. You can talk about it to a team. I don't want to spend too much of time

[01:48:31] - [01:48:47]

Dileep Karri: talking about. This is the program, the features, etc. All of that, you can talk one-on-one with your team if you are interested, okay? Thank you, folks. Some of you who are already in the program are saying that the quality of the program is really good. Really appreciate your kind words.

[01:48:47] - [01:48:55]

Dileep Karri: And, thanks, overall. If you are interested, book the Calendly, talk to the team.

[01:48:55] - [01:49:00]

Dileep Karri: Okay? And you can, you know, take it further from there.

[01:49:00] - [01:49:08]

Dileep Karri: Thank you, folks. I really, you know, appreciate your patience. I know today was not my best overall.

[01:49:08] - [01:49:13]

Dileep Karri: But, still for the thanks for sticking around and supporting me through here.

[01:49:14] - [01:49:16]

Dileep Karri: Thanks a lot, folks, and have a great one.

[01:49:17] - [01:49:25]

Dileep Karri: And Karthik, if there are any other announcements, right, just do the announcements, and we can go ahead, okay? Thank you, folks, have a great one.

[01:49:27] - [01:49:34]

Kartik_Outskill: Cool, folks, how did you like it? Can I have Boom in the chat if you liked this session? Can I have boom in the chat?

[01:49:38] - [01:49:42]

Kartik_Outskill: Amazing, amazing, amazing, amazing. Great!

[01:49:42] - [01:49:51]

Kartik_Outskill: Amazing. So, folks, we are going to, bring a lot more like this, going forward,

[01:49:51] - [01:49:56]

Kartik_Outskill: So don't worry, we are already planning a lot and lot more activities.

[01:49:56] - [01:50:20]

Kartik_Outskill: For our alumni, so we will be having, more such sprints. Can we do it every week? No, it is, obviously, it is impossible for us to do every week, but yes, we are going to do it quite often. One very important thing, I have launched a Seaside poll. Please go ahead and give your feedback over there, and we will be, it will help us out,

[01:50:20] - [01:50:26]

Kartik_Outskill: make things better in the next sessions. Remember, we are having our first

[01:50:26] - [01:50:32]

Kartik_Outskill: product showcase session for Alumni Forge happening this Friday.

[01:50:33] - [01:50:34]

Kartik_Outskill: Okay?

[01:50:34] - [01:50:44]

Kartik_Outskill: Make sure you are not missing out on that. That is very, very important, and that is something that you cannot just miss.

[01:50:44] - [01:51:03]

Kartik_Outskill: Other than that, we already talked about Catalyst. Catalyst is, an extension to AI Accelerator or AIGF, where we focus more on, more on how you can... how you can build a project, and actually sell them, or actually provide them to

[01:51:03] - [01:51:17]

Kartik_Outskill: folks out there, it is more on these lanes, it is like a mini MBA and mini AIMBA for all of you. I have dropped the link. Please, if you are interested, go ahead, and,

[01:51:17] - [01:51:21]

Kartik_Outskill: scan the QR code, you can block your seat.

[01:51:21] - [01:51:44]

Kartik_Outskill: to block seat and have a word, it does not cost anything. You can just go ahead and block your seat. You can talk to our team, you can talk to our experts, they will guide you more, better, they will tell you about the fee structure and everything around it. So, you need not to worry on that part, as well as they are going to talk more about how it, how it can be helpful for all of you.

[01:51:44] - [01:51:52]

Kartik_Outskill: So please, go ahead, lock your seats, and I am going to keep this slide open for quite some time. If you're interested, go ahead, no pressure.

[01:51:53] - [01:52:06]

Kartik_Outskill: For now, thank you all for joining in, thanks a lot, and I will see you all soon. I will see you all with Illumini Forge on Friday, as well as will see you

[01:52:06] - [01:52:16]

Kartik_Outskill: way in, like, next 2 weeks with another sprint, another masterclass. Till then, keep learning, and make sure not to miss out building with AI.

[01:52:16] - [01:52:18]

Kartik_Outskill: Thank you, bye-bye, have a great day, enjoy.
